

**Outreach Connections: Native Health Information
Technology Subcommittee
Notes on Meeting of May 30, 2007**

Present: Claire Hamasu, Janis Teal

The Analyst Programmer hiring process is underway.

We reviewed the charges to the subcommittee in order to clarify our assignment.

- The Design subcommittee decides the functionality of the portal (what we want the site to be able to do).
- The Technology Subcommittee finds applications that will create the desired functionality as well as meet the standards of UNM HSLIC, the host institution.

Brainstorming on what we would like the portal to do:

- Vision: Link to every program that has health information for Native Americans
 - Note: We recognize that the Web 2.0 features which will be used will allow external people to post these links. The Steering Committee or subcommittees will not have to seek out content for posting.
- Vision: Anyone working with health information for Native Americans will know about our portal.
- The portal should be a sharing site so that people who have developed successful projects for delivering health information to Native Americans will be able to share their processes.
- The site should be monitored (but we want to avoid a registration requirement to use the site).
- The Steering Committee and TC4C may have to be the first active users to pilot the site.
