COP Phase 1 RFP Recipients Announced

In March, the college issued its inaugural RFP. The purpose of the RFP is to increase overall research funding and other high impact outcomes by stimulating COP faculty to form new and/or more effective teams that will create and/or strengthen areas of excellence. Phase 1 proposals were evaluated by the Research and Scholarship Committee on the basis of the quality of the research and scholarship team; the quality of the proposed plan or science; future directions and potential for funding, or other aspects that will add value to the COP; and the availability of funds. Of the nine proposals submitted, four projects were recommended for funding with each receiving $5,000. The funded projects are:

2) “Determining the Effects of Diabetic Serum on the Promotion of Cardiovascular Disease”, Drs. Dawn Delfin, Joe Anderson, Matthew Campen and James Nawarskas.

4) “A Pharmacist-based Community Program to Identify Patients at Risk for Prescription Drug Abuse: Phase 1 Development of Risk Tool and Pilot Study”, Drs. Dennis Raisch, Ning Yan Gu, Larry Georgopoulos, Joe Anderson and Megan Thompson.

Congratulations to all recipients! Thank you to each of the Phase 1 applicants, as well as the Research and Scholarship Committee for all their efforts in developing the RFP, outlining the process, and reviewing the applications.

The deadline for the next round is November 15th; Both Phase 1 and Phase 2 proposals will be accepted. Please note that it is not necessary to complete a Phase 1 proposal before applying for a Phase 2 proposal, and unsuccessful applications can be revised and resubmitted. It is anticipated that Phase 2 funding levels will range from $5,000-$15,000 for 6 months or longer. RFP information for the November 15th deadline will be issued shortly.
Please contact Becky Woloszn at rwoloszy@salud.unm.edu if you have any question concerning the RFP.
