

## **Post-doctoral position: Molecular fungal pathogenesis**

A post-doctoral fellowship is available at the University of New Mexico Health Science Center and VA Albuquerque Medical Center to study *Candida* fungal pathogenesis using molecular biology, cell biology, and post-genomic approaches as part of an active mycology research group. Our laboratory is studying the secretion of virulence-associated proteins in *C. albicans*, identification of novel secretory proteins involved in pathogenesis, biofilm formation in secretory mutants, antifungal strategies against fungal biofilms, and high-throughput screening to identify novel compounds against specific *C. albicans* drug targets.

Ph.D in biological sciences and a strong research background, preferably in yeast cell biology, fungal or plant pathogenesis, and/or genomics and proteomics, is required. Must be talented, have the ability to work independently and be highly motivated. The University of New Mexico Health Science Center and the Albuquerque VA Medical Center is an equal opportunity employer.
