- Spicy New Mexican cuisine

albuquerque new mexico
GY2 pharmacy residency programs build on Doctor of Pharmacy (PharmD) education and PGY1 pharmacy residency programs to contribute to the development of clinical pharmacists in advanced or specialized practice. PGY2 residencies provide residents with opportunities to function independently as practitioners by conceptualizing and integrating accumulated experience and knowledge and incorporating both into the provision of patient care that improves medication therapy.

Residents who successfully complete an accredited PGY2 pharmacy residency should possess competencies that qualify them for clinical pharmacist and/or faculty positions and position them to be eligible for attainment of board certification in that practice area (when board certification for the practice area exists).

Goals, objectives and evaluation processes are consistent with those established by ASHP for a PGY2 Oncology residency. Upon successful completion the resident will be able to participate on an interdisciplinary team accepting responsibility for the pharmaceutical care of oncology patients.
