

## **Internship in Clinical Psychology**

<https://hsc.unm.edu/medicine/departments/psychiatry/education/psychology-internship/>

Accredited by the Commission on Accreditation of the  
American Psychological Association \*

### **BROCHURE**

**Applies to those applying to join Cohort: 2025-2026**

**Application Deadline: November 1, 2024**

The Clinical Psychology Internship Program at the University of New Mexico Health Sciences Center School of Medicine is a one-year predoctoral program accredited by the American Psychological Association (APA) to provide broad-based clinical training for the general practice of health service psychology. Our internship is a member of APPIC, and abides by their rules.

**\*Questions related to the program's accredited status should be directed to the Commission on Accreditation:**

*Office of Program Consultation and Accreditation  
American Psychological Association 750 1st Street, NE, Washington, DC 20002  
Phone: (202) 336-5979 / E-mail: [apaaccred@apa.org](mailto:apaaccred@apa.org) / Web:  
[www.apa.org/ed/accreditation](http://www.apa.org/ed/accreditation)*

DEAR APPLICANTS AND OTHER GUESTS,

Thank you for your interest in our Clinical Psychology Internship Program at the University of New Mexico Health Sciences Center in Albuquerque, New Mexico. The 2025-2026 training year will mark our 42<sup>nd</sup> anniversary as an APA-accredited internship! We look forward to training Interns for many years to come, to enter professional psychology in a variety of work settings.

This brochure describes our **5 training tracks for the upcoming training year:**

- Autism Spectrum Disorder
- Clinical Child
- Early Childhood
- Integrated Behavioral Health
- Multicultural Native American and Rural Behavioral Health

In addition to our major training sites, there are descriptions of a variety of electives. We have also provided an update regarding recruitment interviews. We look forward to hearing from you. Warmest wishes for a rewarding application, interview and internship experience

**INTERNSHIP CONTACTS:**

Lindsay Smart, Ph.D., Director of Training, Associate Professor  
UNM Department of Psychiatry and Behavioral Sciences

## **PROGRAM PHILOSOPHY AND AIMS**

The vision of our Clinical Psychology Internship Program is to train psychologists approaching entry-level professional practice to provide and develop interventions and assessments that will be appropriate and effective for culturally diverse populations. Consistent with a scientist practitioner model of graduate psychology education, our internship program utilizes a model of Evidence-Based Practice that fosters an open, collaborative, reflective, and multidimensional perspective while encouraging the analytic skills required for effective decision-making. The APA policy statement (adopted August, 2005) describes evidence-based practice in psychology (EBPP) as “the integration of the best available research with clinical expertise in the context of patient characteristics, culture, and preferences”. Doctoral students typically arrive at the internship level of training with varying degrees of experience with the components of EBPP—that is, research, clinical expertise, and an understanding of culture, context, and preferences. Our program seeks to help Interns understand these components, and to begin to integrate them in practice settings clinical populations that are experiencing severe and complex problems. Our seminars and supervision focus on the essentials of clinical expertise and research, as well as the nature of culture, preferences, and patient characteristics, and more broadly, what we mean by “context.” We find this additional reflection and focus on culture and context to be an effective strategy for Interns to broaden their perspective, and to begin to integrate what they have learned from available research, clinical training, theoretical perspectives, self-reflection, and personal development.

### **Culture**

We view culture very broadly and see it as an integral contextual feature to be addressed in clinical treatment, assessment, and research. Acquiring specific knowledge of frequently identified ethnic groups and cultures alone is insufficient training for psychologists. An over-reliance on acquiring such information risks stereotyping individual clients and families. Instead, we have adopted a cultural responsiveness model that focuses on the “provider,” the interpersonal dynamics, and contextual factors, in addition to the “patient.” The program facilitates Interns' examination of how their own culture (as experienced in their personal, academic, and professional “upbringing”) has influenced them, including who they are, how they see themselves, and what they value in others. Throughout the Internship training year, Interns learn about deconstructing their own perception and point of view. This helps Interns be open enough to notice when someone or something is different, instead of over-assimilating it into their own point of view and set of meanings. Developing such sensitivities can make all the difference, for example, in applying CBT strategies effectively or assessing developmental level accurately.

Among the broad competencies that the program fosters related to developing cultural responsiveness are: ability to understand and appreciate one's own belief system as separate from those of the clients; ability to understand and appreciate others' belief systems and phenomenological perspectives and to "see" the problem within the patient's worldview; ability to focus on meaning instead of solely on "facts" or "data"; ability to conceptualize problems and solutions in more than one clinical paradigm; ability to appreciate and understand how the patient and family perceive their cultural identity and when culture is ostensibly used as a mask; ability to work within what some narrative therapists describe as a "not knowing" stance; ability to collaborate and work in partnerships; ability to learn from others and to learn together; ability not to feel unduly challenged or defensive when questioned; and ability to look inward for answers rather than blaming the patient for not getting better.

Frequent topics of discussion in seminars and supervision related to culture also include paradigms of worldview and "truth," such as logical positivism, mechanism, and contextualism; high-context vs. low-context cultures (after Ned Hall); indigenous healers and alternative health care; general parameters regarding where cultural differences may occur (e.g., wait-time, personal space, eye-contact, self-disclosure); issues of power, privilege, socioeconomic status, and political influence; appreciation of rural versus urban lifestyles; and appreciation of the "cultures" of psychology, Psychiatry and Behavioral Sciences, and other health and mental health professionals. Needless to say, development of cultural responsiveness is a lifelong process. The goal in internship is to increase awareness of these issues in clinical and professional situations, actively engage in the reflective process, and tolerate the ambiguity and discomfort of stepping outside one's own construction of the world.

### **Context**

Our program also considers context very broadly—internal and external. This includes biological, developmental, phenomenological, cognitive, emotional, interpersonal, cultural, community, and systems factors. In therapy, it even includes the therapist. Contextual factors are not static, as functioning varies across time and situations, and depends on access to internal and external resources. The contextual perspective is particularly helpful when functioning is highly variable, or particularly dependent on external resources.

This is often the case, for example, when the patient has a history of severe psychosocial trauma, brain dysfunction, developmental delay, psychosis, mood lability, or immaturity. And children, naturally, are highly dependent on external resources.

Using children as an example, then, assessment should include collateral information across settings and situations as well as assessment instruments

and strategies that vary in their demand on information processing, constructive processes, and self-regulation. The child, as well as external resources related to the child, such as parents, other caregivers, and school and community programs should be considered with respect to both resources and challenges. The most effective, pragmatic, and culturally responsive intervention at a given time may or may not be directly with the child, but rather with another individual or situation external, but significant, to the child. In the case of an individual who has experienced trauma, the developmental level of their cognitive processing may vary dramatically with small changes in the environment, even moment by moment. Then the focus of intervention may be on the internal context instead. Tracking these developmental shifts over time can make a big difference, for example, in successfully implementing cognitive-behavioral therapeutic strategies.

In supervision and seminars, Interns learn to listen, carefully observe, and integrate data from multiple sources to identify contextual factors. They then learn how they might choose and adapt interventions and assessments based on best available research (including their own careful observations of their patient) and clinical practice. Interns also learn how to titrate the rate of therapeutic change to be in balance with the patient's available resources. Interdisciplinary collaboration with Psychiatry and Behavioral Sciences Interns, fellows, and faculty, as well as learning about the effects of medications, is particularly helpful for learning how to balance patient change with resources.

## **ABOUT THE INTERNSHIP**

The Clinical Psychology Internship Program at the University of New Mexico Health Sciences Center School of Medicine is a one-year program accredited by the American Psychological Association to provide broad-based clinical training for the general practice of health service psychology. Treatment settings— inpatient, outpatient, and community--serve a highly diverse population of children, adolescents, adults, and families in the public sector statewide. A high proportion of clinical cases involve neurodevelopmental disorders and/or significant psychiatric disorders, many with a history of multigenerational trauma. Major rotations are with clinical programs of the Departments of Psychiatry and Behavioral Sciences, University of New Mexico Hospital, and Pediatrics at the University of New Mexico School of Medicine, Health Sciences Center (HSC). Some of the elective rotations involve community sites. There are also opportunities for electives and mentoring involving public policy. The University of New Mexico Health and Health Sciences, which includes the School of Medicine and the Department of Psychiatry and Behavioral Sciences, serves a large, unique, and medically complex population and are a consultative resource

for the New Mexico and the Four Corners region of the Southwest. The population is uniquely multicultural and multilingual with 23 Federally recognized tribes (including 19 Pueblos, 3 Apache Tribes, and parts of the Navajo Nation), as well as Hispanic/Latinx, African American, and Asian American communities.

Psychology Interns completing our program will be well-rounded and broadly trained to provide mental health services involving complex systems, across diverse settings (e.g., inpatient settings, various intensities of outpatient services, and medical settings). In addition, Interns receive training in a variety of assessment procedures, treatment approaches, (e.g., ecological/contextual, cognitive-behavioral, behavioral, solution-focused, developmental, psychodynamic, and family systems approaches), treatment modalities (e.g., individual, dyadic, group, family, milieu therapy), and consultation.

For the 2025-2026 Internship training year, the internship program is recruiting for 5 tracks with emphasis in:

Track Name	Number of Positions	Match Number
Clinical Child	2 positions	143611
Integrated Behavioral Health	1 position	143615
Early Childhood	2 positions	143613
Autism Spectrum Disorder	3 positions	143614
Multicultural Native American and Rural Behavioral Health	1 position	143616

**\*\*\*The Pediatric neuropsychology track will not be recruiting for an intern for the 2025-2026 Internship training year. However, pediatric neuropsychology remains as an optional elective for interns on the Clinical Child track.\*\***

Interns on all 5 tracks share a number of didactic, clinical, interdisciplinary, consultative, supervisory, and social experiences, including core seminars, a peer supervision didactic group, and some clinical services. Clinical and professional training for all Interns includes particular focus on fostering a multicultural, developmental, contextual, and interdisciplinary perspective. Members of the faculty have diverse training and specialization, including psychotherapeutic interventions with infants, children, adolescents, adults, and families, forensic and personality assessment, assessment and treatment of developmental disorders, psychotic and trauma-based disorders, and pediatric neuropsychological assessment. Intensive supervision with multiple supervisors is a strength for all internship tracks, and all Interns are encouraged to seek mentorship, consultation, or supervision from any faculty member, as time permits.

Applications to the program are made with the *APPI Online*—the APPIC electronic Application for Psychology Internship that can be found at [www.appic.org](http://www.appic.org). Intern applicants should clearly indicate in their AAPI application letter to which of the 5 program track(s) they are applying. Deadline for applications is **November 1, 2024**. For the sole purpose of arranging interviews, applicants applying to multiple tracks will be asked to designate their preferences regarding which tracks at our site they wish to be interviewed.

### **INTERNSHIP ADMISSIONS, SUPPORT, AND INITIAL PLACEMENT DATA**

*Date Program Tables updated: August 2, 2024*

#### **Program Disclosures**

Does the program or institution require students, trainees, and/or staff (faculty) to comply with specific policies or practices related to the institution’s affiliation or purpose? Such policies or practices may include, but are not limited to, admissions, hiring, retention policies, and/or requirements for completion that express mission and values?	<b>NO</b>
---	-----------

#### **Internship Program Admissions**

##### Brief Program Description

The clinical psychology internship at the University of New Mexico Health Sciences Center has 5 tracks with emphasis in: Clinical Child; Integrated Behavioral Health; Early Childhood; Autism Spectrum Disorder, and Multicultural Rural and Native American Behavioral Health. All tracks share a training philosophy that is multicultural, developmental, contextual and interdisciplinary. Treatment settings include inpatient, outpatient, and community. We serve a highly diverse population of adults, children, adolescents, and families in the public sector, many with a history of trauma. The program has adopted a model of Evidence Based Practice in which contextual factors are keenly considered, and the therapist is culturally responsive. This model assumes that culture, regardless of ethnicity, is a central aspect that must be considered in all types of psychological intervention. In addressing cultural responsiveness, the program emphasizes both process and outcome, as well as focuses as much on the provider as it does on the patient. Specific knowledge and skills are not seen as sufficient to training culturally and developmentally responsive psychologists. Cultural responsiveness is a reflective practice and a lifelong process. To train psychologists in evidence-based practice that will be appropriate for diverse populations, the program fosters an open, collaborative and multidimensional perspective while encouraging the analytic skills required for effective decision-making. In addition to providing training in traditional treatment approaches (e.g., CBT, DBT, behavioral therapy, psychodynamic), the program promotes contextual models, such as family systems, because these models

are conducive to viewing culture as an integral feature to be addressed in clinical practice.

Minimum number of hours required at time of application:

	<b>Required?</b>	<b>Total Hours</b>
Total Direct Contact Intervention Hours	<b>YES</b>	<b>350 Hours</b>
Total Direct Contact Assessment Hours	<b>YES</b>	<b>150 Hours</b>

Other required minimum criteria used to screen applicants:

1. APA or CPA accredited doctoral program (APA preferred)
2. Comprehensive Exams passed by application deadline of November 1
3. 3 years minimum of graduate training
4. Ph.D. and Psy.D. accepted; Ed.D. not accepted
5. Spanish-speaking applicants are given strong consideration as New Mexico is a state with a substantial Spanish-speaking population.
6. Course work and practica in assessment are strongly recommended for applicants to all tracks. Applicants for the Clinical Child, Early Child, and Autism Spectrum Disorder tracks should have significant therapy and assessment hours with children and/or adolescents.
7. Applicants re-specializing in clinical psychology may be considered only if they have followed APA guidelines, which require a return to graduate school for necessary course work. A statement from the director of the graduate clinical training program that all requirements for clinical psychology specialization have been completed will be requested.
8. New Mexico law requires fingerprinting and criminal background checks for staff, employees, and student Interns working in licensed programs for children. Fingerprinting is done during internship orientation. Any Intern who does not clear the background check would be ineligible to work in our facilities and would not be able to complete our internship. For further details, please read the New Mexico Administrative Code 8.8.3 (search internet for NMAC 8.8.3).

<b>Financial and Other Benefit Support for Upcoming Training Year</b>	
<b>Salary</b>	
<b>Annual Salary for Full-time Interns:</b>	<b>\$30,034</b>
<b>Annual Salary for Half-time Interns:</b>	<b>Not applicable</b>
<b>Medical Insurance</b>	
<b>Program provides access to medical insurance for intern?</b>	<b>Yes</b>
<b>Trainee contribution to cost required?</b>	<b>Yes</b>
<b>Coverage of family member(s) available?</b>	<b>Yes</b>
<b>Coverage of legally married partner available?</b>	<b>Yes</b>
<b>Coverage of domestic partner available?</b>	<b>Yes</b>

<b>Annual and Sick Leave</b>	
<b>Hours of Annual Paid Personal Time Off</b>	<b>168 annual + 104 holiday</b>
<b>Hours of Annual Paid Sick Leave</b>	<b>80</b>
<b>Professional leave available?</b>	<b>Yes, on a case-by-case basis</b>
<b>In the event of medical conditions and/or family needs that require extended leave, does the program allow reasonable unpaid leave to interns/residents in excess of personal time off and sick leave?</b>	<b>Yes</b>
<b>Other Benefits:</b>	<b>Interns may also enroll in Dental, Vision, life insurance etc., as described at :</b> <a href="https://hsc.unm.edu/about/administrative-departments/faculty-contracts/faculty-benefits.html">https://hsc.unm.edu/about/administrative-departments/faculty-contracts/faculty-benefits.html</a>

**Initial Post-Internship Positions**

Date Program Tables are updated: August 2, 2024

(For interns completing internship in cohorts: 2020-2021; 2021-2022; 2022-2023)

	<b>2020-2023</b>	
Total # of interns who were in the 3 cohorts	36	
Total # of interns who did not seek employment because they returned to their doctoral program/are completing doctoral degree	1	
	<b>PD</b>	<b>EP</b>
Academic teaching	1	0
Community mental health center	1	0
Consortium	0	0
University Counseling Center	0	0
Hospital/Medical Center	22	0
Veterans Affairs Health Care System	0	0
Psychiatric facility	0	0
Correctional facility	0	0
Health maintenance organization	0	0
School district/system	0	0
Independent practice setting	0	0
Other	11	0

Note: “PD” = Post-doctoral residency position; “EP” = Employed Position. Each individual represented in this table should be counted only one time. For former trainees working in more than one setting, select the setting that represents their primary position.

**INTERN RECRUITMENT AND SELECTION CRITERIA**

Nine Interns are being recruited for the 2025-2026 training year. Intern applicants must be at least third-year doctoral students in psychology from clinical, counseling, or school psychology graduate programs accredited by the American Psychological Association (APA). Applicants from both Ph.D. and Psy.D. programs are encouraged to apply. Applicants must have passed their doctoral comprehensive exams by the internship application deadline of November 1. Approval of dissertation proposal is desirable but not required.

Applicants re-specializing in clinical psychology may be considered only if they have followed APA guidelines, which require a return to graduate school for necessary course work. A statement from the director of the graduate clinical

training program that all requirements for clinical psychology specialization have been completed will be requested.

Substantial course work and practica in clinical and developmental psychology are required. A minimum of 500 hours of clinical practica is required. For all tracks, the preference is a minimum of 150 face-to-face hours of assessment and 350 hours of *intervention* (definition of *intervention* is that used for the AAPI Online). Previous course work must include cognitive and personality testing, personality theory, developmental psychology, psychopathology, psychotherapy, and professional ethics. Additional course work in adult psychotherapy, community psychology, family therapy, and behavior therapy and a practica in psychological assessment are desirable.

All materials are reviewed by the Psychology Internship Training Committee. Important factors in the committee's decision include quality and performance in academic training, adequate experience in therapy and assessment, demonstrated interest in cultural issues, advocacy and/or research, and writing ability. Fluency in Spanish is a plus because of our significant Spanish-speaking population. The application, however, is considered as a whole and the committee also considers the potential match between the applicant's interests and career goals and the internship's philosophy and training goals.

All applicants are notified by email on or before December 6, 2024 , as to whether or not they are being offered an interview for further consideration.

**At this time, our Internship has made the decision to conduct all interviews virtually via Zoom. There will be no on-campus interviews.**

Program coordinators will work with interviewees to schedule Zoom interview dates offered in January. Each interviewee will have the chance to be interviewed by faculty members, meet with the Training Director or Assistant Training Director, and also meet with current interns in order to learn more about the available tracks. The Program Coordinator will briefly go over benefits and resources.

Applicants are encouraged to email the program for more information at any time. Final ranking for each of the program tracks by the Psychology Internship Training Committee is based on both the written application and interview, as well as consideration of goodness of fit.

The internship conforms to all APPIC selection policies (please see the APPIC web site at [www.appic.org](http://www.appic.org)). This internship site agrees to abide by the APPIC policy that no person at this training facility will solicit, accept, nor use any ranking related information from any Intern applicant. The internship is APA-

accredited. Questions related to the program's accredited status should be directed to the Commission on Accreditation:

*Office of Program Consultation and Accreditation  
American Psychological Association  
750 1st Street, NE, Washington, DC 20002  
Phone: (202) 336-5979 / E-mail: [apaaccred@apa.org](mailto:apaaccred@apa.org) /  
Web: [www.apa.org/ed/accreditation](http://www.apa.org/ed/accreditation)*

## **APPLICATION MATERIALS AND DEADLINE**

Our program uses the AAPI Online (universal electronic application form from APPIC). Please see their website ([www.appic.org](http://www.appic.org)) for detailed instructions. **Intern applicants should clearly indicate in their AAPI application letter which of the five program track(s) they are applying.** For the sole purpose of arranging interviews, applicants applying to multiple tracks will be asked to designate their preferences regarding which tracks at our site they wish to be interviewed.

Three or more letters of reference are required, at least one of which is from a faculty member of your academic program very familiar with your academic work and another from someone very familiar with your clinical work. **Application Deadline is November 1.**

## **SALARY, BENEFITS, AND RESOURCES**

The annual Intern salary is \$30,034 for a 12-month, full-time internship from July 1 through June 30 of the training year. Interns sign a one-year contract and receive the same health and other benefits as a UNM Visiting Lecturer. Currently Interns receive 21 days of annual leave, Holiday leave per UNM employee schedule, and 10 days of sick leave. Professional leave is available on a case-by-case basis. Interns are granted 3 days for bereavement leave for immediate family members (spouse, domestic partner, children, parents, and grandparents). Interns have contracts as UNM Visiting Faculty. While they are not eligible for Family Leave, a pregnant Intern or an Intern who has a pregnant spouse/significant other may be eligible for an Extended Leave of Absence for Extenuating Circumstances (ELAEC) described below:

Extended Leave of Absence for Extenuating Circumstances (ELAEC) – Under exceptional cases or in the case of catastrophic illness and/or injury, an extended leave of absence may be granted to an Intern. A catastrophic illness and/or injury is defined as a medical or psychological event experienced by an

Intern, spouse or partner, or an Intern's dependent, which is likely to require an absence from his or her training for an extended period of time. ELAEC must be requested in writing from the director of training and must be approved by the director of training and the departmental chief psychologist. It is to be used after sick and annual leaves are exhausted. Interns receiving ELAEC will be expected to complete their internship training after July 1 without compensation according to the time line established by the director of training, the departmental chief psychologist, and the Intern.

Some of the Interns may need to work a few days between the Christmas and New Year's holidays, but would receive compensatory (i.e., "comp") time to be scheduled at a later date. Interns may enroll in Medical, Dental, Vision, life insurance etc., as described at: <https://hsc.unm.edu/about/administrative-departments/faculty-contracts/faculty-benefits.html>.

### **Other Facilities and Resources**

The general, medical, and law libraries of the University of New Mexico, at which Interns have checkout privileges, are located nearby the UNM Hospital. Interns also have access to UNM computer facilities and electronic databases. Interns have the option to attend the weekly virtual Departmental Grand Rounds of the UNM Department of Psychiatry and Behavioral Sciences, which often presents nationally and internationally known speakers. Other workshops, seminars, and conferences are sometimes offered by other agencies or departments at reduced rates or free of charge.

Psychology Interns are eligible for membership in the New Mexico Educators Credit Union.

The internship program recognizes that Interns may seek to obtain counseling services. Confidential support is available from various sources. Mental health providers may be available in the community; information about these providers is available from the internship director. The Counseling, Assistance and Referral Service (CARS) functions directly or through a referral system for counseling and support and may be accessed by calling (505) 272-6868. The Center for Academic Progress Support (CAPS) is available to help assess difficulties in test-taking, time management, and study skills.

Interns may qualify to purchase desktop and laptop computers, printers, PDAs, video camcorders, digital cameras, and peripherals through the Dell University purchase program at the University of New Mexico Health Sciences Center. The UNM Bookstore also offers special prices on a variety of software packages.

Parking availability and cost are subject to change. Check with the internship coordinator. There is a system of free bus shuttles among campus buildings and the parking lots on campus.

### **Starting date**

Having the last business day in June as the Internship start date permits Interns to sign required contracts, participate in both UNM and UNM Health Sciences Center orientation, and allows all Psychiatry and Behavioral Sciences trainees (interns, fellows, residents) to begin at the same time.

### **Supervision**

Intern supervision is regularly scheduled with multiple supervisors, and is sufficient relative to the intern's professional competencies. At a minimum an intern will receive 4 hours of supervision per week, at least 2 hours of which will be individual supervision—the APA minimum requirement. Interns often receive about 4 hours per week of individual supervision. Supervision may include a combination of verbal report of sessions, live observation, review of taped sessions, and co-therapy, depending on the collaborative decision between the intern and supervisor. The Internship maintains a Telesupervision Policy that is available for review if requested. In-person supervision is encouraged when appropriate and feasible. Faculty are also available outside of scheduled supervision times for discussing pressing clinical issues. Per APA Accreditation Requirements, all supervisors are required to conduct one live observation of interns per quarter. The Supervision Active Learning component of the seminar series serves as group supervision, as well as when interns discuss individual cases in the didactic series.

### **Selection of Supervisors and Electives**

Prior to interns starting internship, the Training Director sends out a survey that allows interns to communicate their interests in track-specific rotations and experiences. Once the survey is completed, the Training Director and Assistant Training Director develop a draft rotation schedule for each intern for the training year, including indicating supervisors. This document is reviewed all faculty in the training program prior to being sent out to the incoming interns for review. Interns are free to indicate any questions or concerns that they may have about their rotation schedule, and steps will be taken to address any concerns within the boundaries of the existing internship structure. The main priority is ensuring that each intern has a training schedule that meets their training needs and interests.

## **EVALUATIONS**

The clinical supervisors formally evaluate the Intern's progress and training experience at 3, 6, 9, and 12 months. Interns may also set their own goals for

the year and fill out self-evaluations. The Training Director or Assistant Training Director meets with Interns individually on a monthly basis to discuss progress on Interns' goals, as well as to help integrate the evaluations by multiple supervisors. The evaluations provide an occasion to alter an individual Intern's program, when appropriate, and to improve the overall training program. Competency levels, assessed by each supervisor for each area of training, are used to track each Intern's progress. At midyear and at the end of the internship year, the training director integrates these separate evaluations into an overall written evaluation, which is sent to the Intern's graduate program. Informal (formative) evaluations of each Intern are ongoing. If indicated, additional guidance or remediation is provided in collaboration with the Intern in order to assist the Intern in their progress in the program. Our Handbook, which is provided to Interns once they start Internship, contains a full description of the relevant policies and guidelines.

The Interns evaluate each seminar and supervisor. Near the end of the year, Interns are provided a day-long retreat to organize their feedback to the program, which they submit as a group in a written report. Interns also participate in a joint retreat with Psychiatry and Behavioral Sciences faculty and trainees to discuss feedback and training issues. The psychology training committee meets monthly to discuss training and administrative issues for the program, as well as the internship cohort as a whole. Each Internship track also meets monthly to track Intern progress and discuss training and administration of the track.

After the internship year, Interns are contacted periodically as part of the internship's ongoing outcome analysis. Relative to attainment of psychology internship training goals, information is requested on current location and responsibilities, populations served, and self-ratings on skills used in current jobs. Also, with the Intern's permission, other people may be asked to rate their current work in specific skill areas. These ratings are compared with the training goals required during the internship year in order to improve the internship program.

## **PROGRAM COMPETENCIES**

Required competencies for the internship are the profession-wide competencies summarized and outlined by the APA Commission on Accreditation (1/1/2017), demonstrated at the Intermediate to Advanced level:

*COMPETENCY 1. RESEARCH: INTEGRATION OF SCIENCE AND PRACTICE*

*COMPETENCY 2. ETHICAL AND LEGAL STANDARDS*

*COMPETENCY 3. INDIVIDUAL AND CULTURAL DIVERSITY*

*COMPETENCY 4. PROFESSIONAL VALUES AND ATTITUDES*

*COMPETENCY 5. COMMUNICATION AND INTERPERSONAL SKILLS*

*COMPETENCY 6. ASSESSMENT*

*COMPETENCY 7. INTERVENTION*

*COMPETENCY 8. SUPERVISION*

*COMPETENCY 9. CONSULTATION AND INTERDISCIPLINARY SKILLS*

Our Intern Evaluation Form provides details of the elements and indicators we assess for each of the above competencies. Science is the foundation to clinical practice; thus, Interns will be expected to integrate empirical literature and scientific orientation with clinical expertise and in the context of patient characteristics. Progress towards profession-wide competencies will be serially assessed by formal evaluation with the expectation that all clinical practice regards eco-contextual, cultural, developmental, biological, and systemic factors as essential to developing competencies.

#### Achieving program goals

Intensive training is provided in a variety of interdisciplinary settings at the University of New Mexico Health Sciences Center with diverse clinical, socioeconomic, and ethnic populations. Elective placements provide experience with community consultation and additional populations. The therapy and assessment experiences offered include:

- Cognitive, developmental, psychological and neuropsychological assessments
- Individual psychotherapy
- Crisis intervention
- Inpatient treatment
- Brief therapy
- Primary care integration-based experiences

Through seminars and supervision, all Interns learn to utilize multiple theoretical frameworks to develop formulations, assessments, and interventions that are effective, as well as culturally and contextually appropriate to specific clinical cases. Frameworks include cognitive-behavioral, behavioral, solution-focused, developmental psychodynamic, family systems, and eco-contextual. Seminars include, for example, multiple modalities of evidence-based psychotherapeutic intervention, psychological assessment, ethics and professional issues, and assessment and treatment of trauma disorders.

The competencies required of all psychology Interns are obtained through seminars, supervised assessments and therapies with a wide range of patients

across diverse settings, self-evaluation, case conferences, consultation with personnel from other community resources and entities, peer supervision seminar, interdisciplinary team meetings, optional meetings with a chosen mentor and regular meetings with the training director. Interns also participate in the interdisciplinary Education and Training Committee retreat, which includes formal written feedback by Interns to the faculty at the end of the year. All tracks include settings that include treatment team experience or participation in case conferences. Clinical cases include many with severe psychopathology, high comorbidity, complex formulations, a history of trauma, neurodevelopmental, neurological or chronic medical conditions that may affect neuropsychological processing, and challenging systems issues.

Supervision is one of the strengths of this internship program. **Interns generally receive four hours of individual supervision weekly.** We believe that supervision should be an active and intensive process, and that Interns should be exposed to a variety of supervisors with a variety of theoretical orientations who can serve as role models and provide the Intern experience with formulating from multiple perspectives. For these reasons, we encourage faculty members to use live supervision, to be co-therapists in some of their Intern's cases where feasible, and to demonstrate clinical assessments and interventions.

There are a variety of professional relationships during the internship year that provide the Intern with the necessary supportive and trusting basis for the development and demonstration of cultural responsiveness—which is also a focus of the Multicultural Didactic Series. All supervisors are encouraged to serve as role models for psychology Interns. Interns can also learn much from mentors as they discuss and collaboratively work through particular professional issues.

If an Intern already has competencies in some of these areas at the beginning of training, the Intern may: (a) emphasize some training experiences and not others, (b) begin training at the Intern's level of skills and learn more advanced skills within a training location, and/or (c) select optional training experiences as specialized areas of interest. At the beginning of the year, each Intern meets with the Training Director to discuss each Intern's personal goals, as well as program goals, and how to build on the knowledge and competencies acquired from their doctoral training and practica in order to meet them. Training is graded in complexity. Supervisors provide more direct modeling and detailed guidance at first, as needed. Interns are expected to function more independently as the year progresses and develop more sophisticated and integrated skills. All training site placements, seminars, elective experiences, and additional supervision are arranged through the Training Director, Assistant Training Director, and the Psychology Internship Training committee.

## **TRACK DETAILS**

- (1) Clinical Child (2 positions)
- (2) Integrated Behavioral Health (1 positions)
- (3) Early Childhood (2 positions)
- (4) Autism Spectrum Disorder (3 positions)
- (5) Multicultural Native American and Rural Behavioral Health Track (1 position)

## **CLINICAL CHILD TRACK**

1. Children's Psychiatric Hospital (CPH)
2. UNM Hospital Child Behavioral Health Outpatient Clinics
3. Psychological testing experiences
4. Electives

The purpose of the Clinical Child Track is to complete training in the general practice of clinical psychology with an emphasis on assessment of and interventions with children, adolescents, and families.

### Children's Psychiatric –Hospital (CPH)

Children's Psychiatric Hospital (CPH) is the inpatient service component of the University of New Mexico Children's Psychiatric Center. This inpatient rotation, for Clinical Child Track Interns, is for 6 months. This psychiatric facility provides comprehensive evaluation and intensive treatment for youth ages 5-17 who present with a wide range of significant psychopathology. There are 5 phases of treatment during the youth's short inpatient stay -- containment, assessment, stabilization, discharge planning, and discharge implementation. Youth are housed in the hospital units, called "cottages," according to age and developmental needs. Patients represent a variety of cultural and ethnic populations, as well as a wide range of diagnostic categories, including mood disorders, trauma- and stress-related disorders, psychotic spectrum disorders, disruptive behavior disorders, personality traits, and neurodevelopmental disorders. Treatment at CPH includes individual, group, family, milieu, and pharmacotherapy. The hospital utilizes strength-based and Dialectical Behavioral-informed interventions. Children and adolescents are admitted into these programs if they are assessed as being a danger to themselves or others, or as having other significant psychopathology resulting in imminent safety concerns.

At CPH, Interns work intensively with children and adolescents in acute care, orienting treatment toward the youth's return to the community. The Intern is assigned a primary supervisor from the unit(s) to which he or she is assigned and typically carries 2-3 patients at a time. Individual, family, and group therapy and staff consultation are

provided by the Intern within a team-oriented approach that includes input from the supervisor, the attending psychiatrist, the special education teacher, the unit nurse manager, case manager, and mental health technicians. Interns gain skills in rapid diagnosis, formulation, treatment planning, and intervention with children and adolescents with severe psychopathology. Youth admitted to these high levels of care have been unsafe toward themselves or others, so assessment, management, and treatment for suicidality are integral to the service.

Psychology Interns are expected to be involved in the treatment team process that includes daily rounds and the development of the treatment plan. Interns may be involved in inpatient DBT-informed skill-building groups.

Interns may also assist with program development or the initial implementation of evidence-based treatments. Program evaluation, including participation in gathering outcome measures is also often a part of the rotation.

Children's Psychiatric Center – Outpatient Services, also known as Programs for Children and Adolescents (PFCA)

Programs for Children and Adolescents (PFCA) is an outpatient therapy clinic that provides individual and group therapy services. *Our mission is to provide culturally responsive, safety-focused, and evidence-based outpatient behavioral health services to improve the emotional, physical, and spiritual health of the youth and families in our community.* We are a multi-disciplinary team of Psychologists, Social Workers and Counselors.

***Time Limited Services – Not to Exceed Two Years***

Stage 1: Walk-in Services and Groups

Stage 2: Evidence-Based Episode of Treatment

Stage 3: Walk-out Services and Groups (same as Stage 1)

• **Inclusion Criteria**

- Ages 5-18
- Can engage in treatment appropriately for the EBP's provided by the clinic
- Consent to treatment recommendations
- Appropriate for an outpatient setting at this level of care

• **Exclusion Criteria**

- Severe eating disorders
- Duplication of services
- Primary SUD needing focused treatment for substance use
- Requires a higher level of care
- Neurodevelopmental presentations are focus for treatment
- Better serviced elsewhere in the community
- Only looking for Family Therapy
- Court Clinic referrals

- Adolescent problematic sexual behaviors requiring specialized treatment (ages 13+)
- Unable to respond to talk therapy
- **Groups**
  - Exclusions: Interfering Psychosis, Interfering Impulsivity/Behavioral, lack of response to EBP's due to cognitive concerns, Needing more individualized care due to acuity (group cannot be a stand-alone service for high-risk patients)

**Evidence Based Treatments**

Dialectical Behavior Therapy (DBT)	Parent-Child Interaction Therapy (PCIT)
Cognitive Behavioral Therapy (CBT)	Parent Management Training (PMT)
Coping Cat	Focused Acceptance and Commitment Therapy (FACT)
Attachment, Self-Regulation, and Competency (ARC)	Motivational Interviewing
Trauma Focused – Cognitive Behavior Therapy (TF-CBT)	Nurtured Heart
Cognitive Behavior Therapy for Psychosis (CBTp)	Circle of Security

Interns rotating through PFCA carry a caseload of individual therapy cases. Although the youth is the identified patient, there are often family and/or caregiver sessions incorporated into treatment. Therapy cases are supervised by a primary, and sometimes a secondary, supervisor. Cases are assigned based on both training and service needs. Interns may be able to co-lead groups with staff if they are interested. The size of an intern's clinical caseload is dependent on how much time they spend at the site and may change from semester to semester.

**Psychological Testing**

The psychological testing experience is woven throughout the entire year, with a variety of brief and comprehensive testing experiences available. The expectation is that Interns will set aside one half a day each week to provide psychological testing, feedback, and reports in both inpatient and outpatient settings

The Core Competencies expected after completion of the Psychological Testing experience include: development of an assessment plan to answer referral questions; appropriate administration, scoring, integration, and interpretation of data within a developmental, language, and cultural framework; cogent, salient and efficiently written psychological reports; and a psychological testing process that reflects evidenced-based practice and applications. The focus of the Psychological Testing experience is on the evaluation of risk and differential diagnosis of psychiatric

disorders. Psychological testing is often requested when there are concerns regarding diagnostic uncertainty/differential diagnosis, questions regarding lack of treatment progress, and medication/treatment/discharge planning (inpatient setting). Interns will develop and hone their clinical skills regarding gathering relevant medical, psychiatric, social, and contextual information, conducting clinical interviews that address developmental and psychological concerns, selecting appropriate psychological test batteries based on the patient and the referral questions, along with the administration, scoring and interpretation of a wide variety of psychological tests/instruments for children and adolescents, and integration of results ethically and competently. The Intern will also receive training in report writing, with an emphasis on efficient communication of necessary information and providing feedback to patients, referring clinicians, and treatment teams.

Bilingual Psychological Testing (English/Spanish) experiences are offered for Interns who have the interest and language proficiency to conduct these specialized psychological assessments. This is also based on availability of bilingual supervising psychologists.

Supervision is provided on-site (inpatient and outpatient) by psychologists with extensive experience in the psychological assessment of children and adolescents.

### Child Clinical Track Electives

Interns on the Clinical Child Track will choose one of the following major elective rotations. These rotations are designed to allow an Intern to focus on a particular area of interest. Electives are typically 1 day/week for 3 or 6 months. A few Electives have the possibility of occurring 1 day/week for 12 months, however this is on a case-by-case basis. Elective availability may change and new options may become available depending on supervision availability and clinic space.

1. Public Policy at The Division of Community Behavioral Health (CBH)
2. Pediatric Neuropsychology Rotation
3. Autism Spectrum Evaluation Clinic
4. Traumatic Specialization
5. Behavioral Health in Primary Care at Sandoval Regional Medical Center
6. Carrie-Tingley--Pediatric Rehabilitation Hospital
7. Young Children's Health Center
8. Comprehensive Cancer Center

Public Policy Elective at the Division of Community Behavioral Health in the UNM Department of Psychiatry and Behavioral Sciences (CBH) (Primary Supervisors: Deborah Altschul, Ph.D.; Brian Isakson, Ph.D.)

CBH is excited to offer a public behavioral health and policy major elective. This includes the opportunity to work with a multidisciplinary team, including

professionals in psychology, psychiatry, social work, public health, sociology, and anthropology. This internship elective is available in both the fall and spring semesters and requires a time commitment of one day per week for a 6-month period. Projects will be assigned based on the needs of CBH and the interests of the Intern. Projects may have an emphasis on child, adolescent, or adult public behavioral health; and will include activities such as grant writing, public policy development, outcome research and evaluation, clinical/consultative services via telehealth, etc. The emphasis will be to provide Interns with the opportunity to engage in activities that directly enhance the behavioral health system of New Mexico, including the state's public behavioral health system as well as tribal behavioral health systems.

CBH seeks to: strengthen behavioral health services research and evaluation capacity, and provide training and workforce development and community oriented psychiatric services to traditionally underserved populations. For the past 25 years, CBH has been providing community consultation, training, services research/evaluation, and direct service throughout the State, including serving as the lead evaluators and clinical trainers on a number of state and tribal grants on a wide range of topics such as: Permanent Supportive Housing, SBIRT, Jail Diversion, Systems of Care, Home Visiting, Child Trauma, Integrated Care, Early Psychosis and Suicide Prevention. Its 30 faculty and staff have a variety of expertise including public behavioral health, cultural competency, EBP implementation, tele-psychiatry, Native American behavioral health, refugee behavioral health, primary care integration, trauma, serious emotional disturbance, serious mental illness, and services research and evaluation.

CBH faculty is also involved in providing training across the state related to public mental health and evidenced practices, and they provide consultation on the impact of trauma on development. They have partnerships with UNM Department of Psychiatry and Behavioral Sciences, State agencies, Native American tribal communities, Peer-run organizations, and refugee communities, all of which are potential sites for collaborations with Interns.

Pediatric Neuropsychology Elective (Supervisors: Amanda Ward, Ph.D. and Eric Zimak, Ph.D.)

This rotation is offered through UNM Hospital's Center for Neuropsychological Services (CNS). CNS provides inpatient and outpatient neuropsychological assessment and consultation services for individuals with various neurodevelopmental, neurological, or chronic medical conditions that may affect central nervous system function, as well as psychiatric conditions. Referrals are received from the University of New Mexico Hospital and from clinicians throughout the state.

Pediatric neuropsychology is a specialized area of practice that entails unique procedures and a body of knowledge specific to the area. Given the scope and fast pace of this rotation, it is encouraged that interns electing to complete this rotation have graduate school experience in at least one neuropsychology practicum placement. The rotation will provide the Intern with the opportunity to gain experience in the neuropsychological assessment process of children with medically related problems, neurodevelopmental disorders, and/or psychiatric disorders. For those Interns who wish to pursue additional training in neuropsychology, this rotation will be a valuable experience.

For this 6-month rotation, the Intern is expected to be available on-site between 8-10 hours per week, and see approximately one outpatient every other week. Additional time may be required for supervision, scoring, and report preparation. The Intern learns how to conduct clinical interviews addressing neurocognitive issues associated with various neurological disorders and administer and score a wide variety of neuropsychological tests/instruments for children. The Intern also receives exposure to the interpretation process and assists in report writing and feedback to patients and referring clinicians. The Intern is expected to read assigned supplemental readings, and encouraged to attend CNS weekly didactics.

Autism Spectrum Evaluation Clinic (Primary Supervisors: Sylvia J. Acosta, PhD; Brandon Rennie, PhD; Tiffany Otero, PhD., Evelyn Fisher, PhD)

A rotation through the Autism Spectrum Evaluation Clinic (ASEC) at the Center for Development and Disability (CDD) is offered pending availability of supervision. The rotation includes participation in the Autism Spectrum Evaluation Clinic (ASEC), which specializes in interdisciplinary, evidence-based evaluation of children suspected of having Autism Spectrum Disorder (ASD), ages 12 months through 18 years. See description under Autism Spectrum Disorder Track for more information about ASEC.

This rotation requires at least a one day a week commitment for a 6-month period. The focus of this rotation is to gain exposure to best practice assessment procedures for diagnostic formulation of Autism Spectrum Disorder. Emphasis is placed upon learning diagnostic interviewing, ASD best practice diagnostic assessment including selection of an assessment battery (cognitive, adaptive and behavioral assessment measures), and potentially to reliably administer, interpret, and convey the results of the ADOS-2. The Intern will be expected to contribute to written reports including test results and interpretation, as well as assist in formulation of diagnostic impressions and provide feedback and intervention recommendations.

Traumatic Specialization (Supervisors: Rebecca Ezechukwu, Ph.D., Rachel Miller, Psy.D., Destiny Waggoner, Ph.D.)

The Trauma Specialization elective focuses on the treatment of childhood traumatic stress for children and adolescents who display symptoms that warrant trauma-focused treatment. Youth present with a range of discrete and complex trauma experiences, and treatment is provided to the youth, family, and caregiving system. Our clinical supervisors include psychologists who are members of the National Child Traumatic Stress Network (NCTSN) and trained in the implementation of evidence-based practices (EBPs) for treating childhood traumatic stress, including Trauma-Focused Cognitive Behavioral Therapy (TF-CBT), Attachment, Self-Regulation, and Competency for Complex Trauma (ARC), and other treatment components to address childhood bereavement and traumatic grief. Supervisors utilize various multicultural, developmental, and reflective approaches to support individual supervision. Interested applicants are encouraged to indicate other areas of interest to help individualize training opportunities for the treatment of child traumatic stress.

This is a unique 12-month major elective during which Clinical Child Psychology Interns will:

- Receive training in EBPs for the treatment of childhood trauma (ARC, TF-CBT)
- Provide individual, group, and family trauma therapy sessions as well as parent/caregiver support and skill-building to diverse youth and families referred from UNM Children's Psychiatric Center -Inpatient & Outpatient Services, UNM Pediatrics- Child Abuse Response Team, UNM Carrie Tingley Rehabilitation, and numerous community organizations
- Conduct brief assessments to screen for stress and trauma symptoms impacting youth functioning
- Learn and utilize measurement-based care to deliver therapeutic assessment. Use youth and caregiver symptom inventories to provide feedback
- Provide individual, group, and family trauma therapy sessions, as well as caregiver support and skill-building sessions, to diverse youth and families referred from both UNM clinics and community organizations.
- Engage in weekly individual reflective supervision with an emphasis on supporting professional resilience, reflective capacity, and multicultural development

Optional trauma-informed care opportunities:

- Conduct co-therapy while learning EBP models (e.g., for shared family cases with multiple siblings in treatment)
- Shadowing opportunities with interdisciplinary practitioners across UNM who address trauma

- Assist in the development and delivery of community trainings, consultation, and outreach opportunities regarding childhood traumatic stress, as available
- Participate in program development and outcome and evaluation research in trauma-informed care
- Participate in webinars and other training from the NCTSN. This network provides a wealth of training, consultation, and support with national leading experts in child trauma. [UNM has been an NCTSN site](#) since 2012 and brings NCTSN resources and EBPs into the track specialization, individual/group supervision, and the didactic seminars for all Interns.

Note that Interns on the Child Clinical Track all obtain experience working with trauma regardless of whether they are on the Traumatic Stress Specialization elective. Interns that choose the Traumatic Stress Specialization elective will have a higher number of trauma cases and a choice of participating in various trauma-informed care opportunities.

Behavioral Health in Primary Care at Sandoval Regional Medical Center  
(Supervisor: Christopher Morris, Ph.D.; Jaye Turrietta, Ph.D.)

This placement is located within the Family and Community Medicine primary care clinic at SRMC, and the Intern provides outpatient integrated behavioral health care in this setting. Referrals come predominantly from the eight primary care providers with whom the Intern works closely on a daily basis. Patients of all ages are seen in the family practice clinic. Presenting issues range from depression, anxiety, trauma, and substance use disorders to pain disorders, somatization disorders, tobacco cessation, obesity, and diabetes.

During the six-month elective rotation, the Intern will be onsite one full day per week at SRMC. The initial part of the rotation provides exposure to readings, models, and cultural frameworks in integrated care, review of assessment and treatment tools specific to the setting, orientation to hospital and clinic, and opportunity to shadow primary care providers' patient visits.

The Intern will work as a generalist with a diverse caseload in terms of presenting issue, age, and cultural identity, with some opportunity to tailor the assigned cases to specific interests of the learner. The experience includes short-term consultation and intervention focused on needs related to health behavior and primary care, and more intensive psychotherapy addressing specific mental health diagnoses. There is the opportunity to learn to implement Focused Acceptance and Commitment Therapy, particularly during warm hand-offs. Supervision in Spanish is also offered.

UNM Sandoval Regional Medical Center (SRMC) is a community-based academic healthcare facility that includes 72 acute-care inpatient beds, and outpatient primary care and specialty care clinics. Sandoval County encompasses 3,716 square miles, and the medical center serves diverse urban, rural, and frontier populations.

UNM Children's Hospital – Pediatric Rotation: UNM Carrie Tingley Pediatric Rehabilitation Inpatient Unit and Consultation/Liaison Service (Supervisor: Kati Morrison, PhD)

UNM Health's Carrie Tingley Hospital (CTH) has been providing compassionate, coordinated health care to children and adolescents with complex musculoskeletal and orthopedic conditions, rehabilitation needs, developmental issues, and long-term physical disabilities for more than 70 years. CTH Pediatric Inpatient Rehabilitation is located on the 5<sup>th</sup> floor of UNMH and has 8 dedicated beds for rehabilitation, with other beds on the unit designated typically to orthopedic patients. Patients' stays range from a few days to 6-12 months; 2-6 weeks is typical.

Psychology Interns provide clinical services with patients with complex medical, neurological, physical, and co-morbid psychiatric conditions. The most frequent diagnoses include Traumatic Brain Injury, Spinal Cord Injury, stroke, or medical illnesses with resultant disabilities (cystic fibrosis, diabetes, cardiac conditions, Multiple Sclerosis). Many patients have co-morbid psychiatric diagnoses including PTSD, depression, and anxiety disorders. Psychology Interns serve in multiple roles including brief psychological and neuropsychological assessment; individual, group, and family psychotherapy; stress management; and consultation with other disciplines. Psychology interns often work with underserved populations with complex conditions involving issues of adjustment to physical and cognitive loss and reintegration into the school and larger community. Many patients follow up in Carrie Tingley's outpatient clinic for ongoing therapies, so many cases tend to be longer-term. Interns also have the opportunity to deliver therapeutic services with prior inpatient cases for continuity of care and complete intakes at CTH outpatient. As an interdisciplinary team, Interns will have frequent opportunities to collaborate in team meetings with physical, speech/language, occupational, and massage therapists, social workers, medical providers and students from a variety of disciplines, and nursing staff. In particular, there is ongoing collaboration with psychiatry and neuropsychiatry fellows.

Psychology Interns also can consult with psychiatrists and provide services through the UNM Children's Hospital C/L Service. This service provides a range of behavioral health evaluations and interventions for hospitalized children, adolescents and their families. The goal is to provide child and family centered care that can mobilize individual and family strengths and resources to manage challenges arising from chronic and acute health problems. Interns will have opportunities to work with children with a variety of chronic and acute medical problems across the full developmental spectrum. The majority of work takes place on a short-term basis but opportunities exist for follow up care as some patients will return frequently for ongoing treatment.

UNM Hospital's Young Children's Health Center (Supervisor: Destiny M. Waggoner, Ph.D.)

Young Children's Health Center (YCHC) is a community-based integrated pediatric primary care clinic that provides comprehensive health services to families with children from birth to young adulthood residing primarily in the International District of the southeast heights of Albuquerque, NM. This area contends with many social-environmental issues such as high poverty and high crime rates. The clinic serves a culturally diverse population including immigrant and refugee youth and families. YCHC utilizes a trauma-informed care approach with the primary goal of promoting the physical and emotional wellbeing of children and their families through a strengths-based, multi-disciplinary approach to comprehensive health care. **Interns will typically see youth ages 5-18** with an emphasis on a family-based approach. Special components of this clinic include home visitation to families with babies and young children ages 0-5, behavioral health services (medication management, brief intervention, and psychotherapy), case management, youth and parent groups, and outreach activities. The behavioral health services address a wide-range of presenting issues and severity including anxiety, depression, traumatic stress, school problems, comorbid medical issues, etc. This is an excellent opportunity for bilingual interns. This is also a great opportunity to develop skills in working with interpreters in a variety of languages including Spanish, Arabic, and Swahili. If interns are interested in the trauma-specific elective, interns may have the opportunity to complete a 1-2 day year-long rotation at YCHC. An opportunity to do a six-month 1-2 day week rotation focused on brief intervention services may be available.

- Interns will have the opportunity to work as part of a multi-disciplinary team including nurses, medical assistants, pediatricians, psychiatrists, social workers, and case managers. The intern's core experiences will involve:
  - Identify emotional and behavioral needs of referrals from medical staff
  - Triage needs and engage in service planning
  - Deliver brief intervention and crisis intervention services to address families' immediate needs
  - Provide individual and family psychotherapy using trauma-informed and trauma-focused evidence-based treatments including Attachment, Self-Regulation, and Competency (ARC), Cognitive Behavioral Therapy (CBT), Trauma-Focused CBT, Motivational Interviewing (MI), and Family Therapy treatment modalities
  - Utilize outcome-based measurement system to follow treatment progress
  - Navigate systems of care including coordinating with medical and non-medical service providers
  - Consultation and other learning opportunities are available as they present

Comprehensive Cancer Center Specialty clinic (1201 Camino de Salud, Supervisor: Anjanette Cureton, Psy.D.)

The UNM Comprehensive Cancer Center is a full-service ambulatory National Cancer Institute- designated Comprehensive Cancer Center delivering the highest quality integrated cancer diagnosis and cancer care. The Cancer Center is a minor rotation (1 day/week) during which trainees provide psychotherapy and a full range of psychology services to individuals, couples, and family members who have been impacted by cancer. Psycho-oncology includes teaching mindfulness, practicing radical acceptance, teaching a wide variety of coping skills, and often helping patients and family members to prepare for and face end-of-life. Most individuals facing cancer experience some level of anxiety, depression, and medical trauma. Because a cancer diagnosis impacts every aspect of life, the focus is often on managing changing family dynamics, coping with financial hardship, and changes in sense of self. Opportunity to co-facilitate support groups, to work as part of an interdisciplinary team, to provide emotional support to oncology inpatients, and to participate in group case consultation/supervision with practicum students.

### **Integrated Behavioral Health Track**

Truman Health Services and at least one other Primary Care Clinic site are required training experiences for Interns on this track.

Truman Health Services (801 Encino Pl NE; Supervisor: Kim Kalupa, Ph.D.)

Truman Health Services is a Patient Centered Medical Home (PCMH) providing primary and specialty care for persons with HIV in a unique interdisciplinary setting. Our setting provides exciting opportunities for our interns to support patients as they manage both acute and chronic medical issues and the behavioral, cognitive and emotional issues that impact and are impacted by these conditions. Our patient population is uniquely diverse with regards to culture, economic backgrounds, ethnicity, religion, sexual orientation and gender identity. Truman Health Services is recognized as Level 1 PCMH by the NCQA.

The Truman behavioral health team is comprised of psychologists, a psychiatrist, and several Master's level therapists. Our services are fully integrated into the primary care setting and we have a strong role in consultation and collaboration with primary care staff. Behavioral health staff participate in daily huddles with the medical team and are available throughout the day to support primary care staff in addressing the needs of their patients. We provide a range of services to include brief assessment and treatment, longer-term therapies, couples and group therapy, psychiatric consult, and warm hand off care to patients. Current group offerings include MBSR (Mindfulness Based Stress Reduction), DBT Skills group, Smart Recovery, and ACT.

There is also great diversity in terms of the psychiatric acuity of our patient population and the range of diagnoses that present to our clinic. Our clinicians also have the opportunity to work with more health psychology specific concerns such as weight management, diabetes management, pain management, adherence to treatment and

pre-surgical evaluation. Additionally, Interns will have the opportunity to provide cognitive screens for dementia and ADHD evaluations for adults. The purpose of this rotation is to provide training in a primary care integrated home model for behavioral health. Additional readings and trainings will be provided as indicated by Intern's level of understanding for our population.

South East Heights Clinic – Refugee Mental Health Clinic, Family medicine (8200 Central Ave SE; Supervisor: Brian Isakson, Ph.D.)

South East Heights Clinic is a primary training site for family medicine doctors, along with North Valley Clinic. This clinic is located in the most densely populated neighborhood in Albuquerque, with the highest incidence of crime and addiction. The clinic serves a large refugee (Iraq, Syria, Afghanistan, Democratic Republic of Congo, Burundi, and Rwanda) and immigrant (Vietnam, Central American, Mexico) population. Opportunity to hold a small caseload of refugee adults, as well as opportunities to work with refugee children and Spanish speaking patients. This is co-located model where the focus is on helping refugees and immigrants adapt to life in the United States, deal with current stressors, and address past trauma. This ideally a year-long commitment due to the nature of the long-term therapy. This rotation is also available as a major elective for interns on the child track.

Eubank Women's Health Clinic – Women's Behavioral Health (Family medicine, Eubank Women's Health Clinic and the co-located Journeys Clinic, 2130 Eubank Blvd NE; Supervisors: Jennifer Crawford, Ph.D. and Melek Yildiz Spinel, Ph.D.)

Eubank Women's Health/Journeys is the primary training site for the Women's Health rotation in the Integrated Behavioral Health track. The Journeys Clinic serves women referred for psychotherapy and medication consultation related to perinatal depression, anxiety, and other mental health conditions exacerbated during pregnancy or in the postpartum period. Providers in the clinic also provide behavioral health interventions for women with chronic pelvic pain and are working with clinic management to expand integrated behavioral health in the setting. Opportunity to hold a small caseload of adult women, co-facilitate Cognitive-Behavioral Therapy for Chronic Pain, program development and quality improvement, and research.

Comprehensive Cancer Center Specialty clinic (1201 Camino de Salud; Supervisor: Anjanette Cureton, Psy.D.)

The UNM Comprehensive Cancer Center is a full-service ambulatory National Cancer Institute- designated Comprehensive Cancer Center delivering the highest quality integrated cancer diagnosis and cancer care. The Cancer Center is a minor rotation (1 day/week) during which trainees provide psychotherapy and a full range of psychology services to individuals, couples, and family members who have been impacted by cancer. Psycho-oncology includes teaching mindfulness, practicing radical acceptance, teaching a wide variety of coping skills, and often helping patients and family members

to prepare for and face end of life. Most individuals facing cancer experience some level of anxiety, depression, and medical trauma. Because a cancer diagnosis impacts every aspect of life, the focus is often on managing changing family dynamics, coping with financial hardship, and changes in sense of self. Opportunity to co-facilitate support groups, to work as part of an interdisciplinary team, to provide emotional support to oncology inpatients, and to participate in group case consultation/supervision with practicum students.

### Integrated Track Supervision

Given the diversity of clinics, staff, locations, populations served, etc., in primary care, flexibility and collaboration are the keys to a wonderful internship experience. The seventeen primary care psychologists cover a wide range of orientations and approaches to therapy, always culturally tailored and trauma-informed to the patient, including: family, narrative and play therapy, hypnosis, biofeedback and EMDR, object-relations, feminist, interpersonal and Jungian, as well as CBT, DBT, ACT and motivational interviewing. Brief and long-term models, process and skill-based groups available to lead or co-facilitate.

## **EARLY CHILDHOOD TRACK**

### 1. Center for Development and Disability (All year)

The purpose of the Early Childhood Track is to complete training in the general practice of professional psychology with emphasis on early childhood mental health and development. The training model, shared by all tracks within the internship, includes an interdisciplinary, multicultural, and developmental perspective with consideration of internal, external and systemic contextual factors considered to be integral to developmental and psychological assessment, formulation, and therapeutic intervention. This track is unique in its combined focus on understanding typical and atypical development in young children as well as providing extensive exposure to work with trauma and early adversity in infants and toddlers. Using an empirically-informed, relationship-based approach to both foci, interns on this track will learn to integrate these knowledge areas and develop a range of skills vital to work with this very young population.

The UNM Center for Development and Disability (CDD) is a University Center for Excellence in Developmental Disability housing a myriad of diverse direct clinical service, prevention programs, interdisciplinary training, community training and partnerships, policy development and analysis, and applied research for the benefit of individuals with and at risk for disabilities and their families throughout New Mexico. The programs are administered through the UNM Department of Pediatrics, and funded through various state and federal agencies. CDD is located about two miles from the main campus of the UNM School of Medicine, where parking is available. The CDD serves a diverse community of patients, including our local Albuquerque community as well as the larger state, which consists of many rural communities where poverty and intergenerational/historic trauma are frequent complicating factors for families. Interns

will receive a balance of assessment and intervention training through year-long rotations within the Early Childhood Home and Family Services (ECHFS) Division of the UNM Center for Development and Disability (CDD). The following rotations serve as core areas of training during the internship year:

Early Childhood/Infant Mental Health (Intervention, Full year rotation)

Interns provide early childhood assessment and treatment services for children birth to five who have experienced abuse, neglect, trauma, or attachment disruptions. The majority of referred children and families present with concurrent environmental risk factors and trauma exposure, and many of the children served have endured multiple caregiving disruptions and/or overt neglect and abuse. Young children and families served are referred through CDD assessment clinics, community providers, Child Protective Services (CPS), and the UNM FOCUS Program (a Part C Early Intervention provider serving infants and toddlers birth to three years old who have been prenatally exposed to drugs and alcohol and their families).

Interns will have the opportunity to learn and practice evidence-based dyadic treatment models including Child-Parent Psychotherapy, Circle of Security, Interaction Guidance, and other intervention models consistent with an attachment and infant mental health theoretical perspective. Services are provided in the clinic and at times over telehealth, as well as in the family home, and Interns must be comfortable with a home visitation model. For interns demonstrating fluency in Spanish, dyadic treatment cases where Spanish is the primary language can be assigned and Spanish-language supervision can be available. The major supervisors for the rotation are Julia Oppenheimer, Ph.D., IMH-E(III), Peggy Maclean, Ph.D., IMH-E(III), and Marcia Moriarta, Psy.D., IMH-E(IV).

UNM FOCUS Program (Intervention and Consultation, Full year rotation)

The UNM FOCUS Program is an integrated family medical home and early intervention (IDEA Part C) program that serves families from birth to three. The majority of these children and families also present with concurrent environmental risk factors, and many of the children served endure multiple caregiving disruptions and/or overt neglect and abuse. Caregivers served by the program have similar complex trauma and substance use history. The early intervention services provided include home-based service coordination/case management and developmental services, which may include speech/language, physical, and occupational therapy, depending on the developmental needs of the child. In collaboration with the Early Childhood Mental Health Service at the CDD, the program also provides clinical assessment and treatment of parental functioning and dyadic/caregiver-child interaction of families. The assessment and treatment services use evidence-based models of treatment and assessment deeply grounded in an Infant Mental Health and trauma-informed theoretical framework. Medical services provided by the program include both adult and pediatric care of any family member (caregiver, enrolled child, and siblings) involved in the program, buprenorphine replacement therapy for caregivers struggling with opiate addiction, and psychiatric consultation.

Working as part of an interdisciplinary team, the Intern provides infant-parent and child/family psychotherapy services for children/families. Most services are provided in the family home, and the Intern must be comfortable with a home visitation model. The intern will have the opportunity to apply models learned in their ECMH rotation (Child-Parent Psychotherapy, CPP; Circle of Security, COS) in a short-term or consultative setting, and will be exposed to other models such as the Facilitating Attuned Interactions (FAN) approach. Trainees will also join a weekly FOCUS medical clinic. As part of the interdisciplinary medical team, trainees will have the opportunity to provide short-term consultation and intervention support to families seen in the clinic and support the medical team in situations that are emergent in nature, such as a parental mental health crisis and/or child/caregiver safety concerns.

#### Early Childhood Evaluation Program (ECEP) (Assessment, Full rotation)

ECEP provides inter-disciplinary developmental and diagnostic evaluations for children birth to three throughout the state of New Mexico. ECEP serves a wide-ranging population that reflects the unique and diverse communities of New Mexico. The ECEP team is interdisciplinary and typically includes a pediatrician, speech-language pathologist, occupational or physical therapist, and a psychologist. ECEP evaluations take place primarily in the CDD's Albuquerque clinic, but also in community sites throughout the state. The option for telehealth evaluations has also been incorporated into the ECEP model, which has decreased the need for community-based outreach clinics; however, psychology Interns may have the opportunity to participate in community-based outreach clinics under the supervision of a licensed psychologist, pending availability.

During ECEP clinics, the Intern will administer standardized evaluation procedures appropriate for children birth to three. Measures used are the Bayley Scales of *Infant and Toddler Development (Bayley-4)* and *Differential Ability Scales-II (DAS-II)* to assess cognitive development; adaptive behavior measures including the *Vineland-3* and *ABAS-3*; and the *Autism Diagnostic Observation Schedule, Second Edition (ADOS-2)*. Referral questions for children seen by ECEP include, but are not limited to:

- Screening of Autism Spectrum Disorder
- Evaluation of medical and biological factors impacting developmental concerns
- Evaluation of behavioral and regulatory concerns
- Comprehensive developmental assessment to support early intervention providers who are finding certain children challenging to work with for a variety of reasons

#### Interdisciplinary Training Clinic (ITC) (Assessment, Full year rotation)

The Interdisciplinary Training Clinic (ITC) is a required experience for both ASD and EC Track Interns. The ITC brings together clinicians from ECEP and the Autism Spectrum Evaluation Clinic (ASEC) for a dynamic interdisciplinary training experience for a variety of learners, including Psychology Interns. Interns conduct their respective developmental/diagnostic evaluations for young children referred for concerns about developmental or neurodevelopmental disabilities including ASD in the context of a supportive interdisciplinary environment.

The ITC fosters interdisciplinary teaming and learning. Clinicians conduct client “rounds” before and after the evaluation clinics to discuss clients, plan for evaluation and coordinate care. Interdisciplinary rounds are client/family centered (with a focus on understanding and meeting the needs of the family). The current disciplines represented include: Psychology (licensed faculty, postdoctoral psychology fellows, predoctoral psychology interns), Speech Language Pathologist, Social Work, Physical Therapy, Occupational Therapy, Physician (including pediatric intern, pediatric resident), Psychiatry (Child Psychiatry) Fellow, and Administrative Assistant. The current model allows for psychology postdoctoral fellows to provide clinical supervision to the Interns while under the supervision of a faculty member. The ITC is held on Thursdays from September through June and Interns are expected to participate in all aspects of the clinic.

#### The Early Childhood Mental Health Consultation Clinic (Assessment and Consultation, 6-month rotation)

This consultation clinic operates in conjunction with the Department of Psychiatry’s Birth to 5 Clinic, providing medication management and ongoing follow-up to children and families. Interns will participate as part of an interdisciplinary team (Psychiatry, Psychology, Pediatric medicine trainees) in assessment visits for children birth to five to better understand behavioral concerns and the impact of early life experiences on current development and behavior. Under a licensed clinical psychologist’s supervision, Interns participate in clinical interviewing and history-taking, clinical observation, and assessments as appropriate to provide diagnosis, referral resources, and support strategies. Short-term consultation to assist families and providers to expand their understanding of the child, support implementation of recommendations, model specific intervention strategies, and support links to additional community services might be included in this extended psychological evaluation service.

#### Other CDD Clinics

The following clinics are additionally offered at the CDD, and may provide opportunities for interns to observe or participate, depending on interest and availability of supervision during the training year:

#### Bilingual (English and Spanish) Clinics

Bilingual (English and Spanish) interdisciplinary evaluations are conducted within the context of ECEP (and ASEC). Interns who participate in the bilingual evaluations and follow-up services are expected to have fluency with the Spanish language, but prior experience in evaluation or intervention services is not required. The Intern will be part of the interdisciplinary team, which includes a bilingual psychologist, a bilingual speech/language pathologist, and a bilingual physician. The team uses culturally appropriate assessment batteries for evaluation of children suspected of having ASD and who are exposed to a bilingual environment. Clinicians administer and interpret bilingual speech and language measures, nonverbal cognitive assessments, the *ADOS-2* in Spanish,

Spanish-language behavior questionnaires, and adaptive behavior measures. A certified language interpreter assists with the clinical interview if necessary and the family receives feedback in their preferred language. Modalities for evaluation include in-person and telehealth, in order to increase access to culturally and linguistically diverse clients. Interns are expected to contribute to case conceptualization with a consideration of the culturally and linguistically diverse issues in addition to the use of evidence-based practice evaluation of ASD. The family is offered a written summary of the evaluation report translated in Spanish and the Intern may be responsible for the development of a reader-friendly version of the translated report.

### Fetal Alcohol Spectrum Disorders Clinic

The Fetal Alcohol Spectrum Disorders (FASD) Clinic provides diagnostic and consultation services for individuals aged birth through 21 years who have a history of prenatal exposure to alcohol and/or other substances. The multidisciplinary team includes medicine, neuropsychology, psychology, occupational therapy, and social work. Diagnostic evaluations are focused on determining the impact of prenatal exposure, or presence of a Fetal Alcohol Spectrum Disorder when prenatal alcohol exposure is suspected or confirmed. Assessment encompasses developmental, intellectual, academic, sensorimotor, adaptive behavior, and social emotional functioning along with a physical examination of growth and dysmorphology. Team members also provide consultative services via in-service trainings around the state and attendance at Individual Education Program meetings.

### Other Opportunities for Interns

Psychology Interns are encouraged to participate in a variety of policy discussions and leadership groups, and be involved in legislative initiatives related to mental health services. However, the Early Childhood Interns do not complete major or minor electives as described for other Intern tracks.

The typical caseload at CDD:

Semester 1:

- 1 ECEP clinic per week
- 1 ECEP ITC clinic per week
- 1 ECMH consultation clinic/Birth to 5 clinic per week
- 1 FOCUS rotation
- 5-6 ECMH cases per week
- CDD required didactics 1-2 hours per week

Semester 2:

- 1 ECEP clinic per week
- 1 ECEP ITC clinic per week
- FOCUS rotation (including additional FOCUS medical clinic)
- 5-6 ECMH cases per week

- CDD required didactics 1-2 hours per week

#### Facilities/Resources/Space/Mileage & Travel for CDD rotation

- In addition to cubicle/office space, and computer, a cell phone will be provided for off-site home visits.
- The CDD has multiple rooms equipped with one-way mirrors/sound systems, and video recording capacity for seeing clinic patients.
- Interns will be expected to use their personal vehicles for travel to local home and metro community sites (unless traveling with the ECEP team). Interns will be reimbursed for mileage depending on the nature of travel.
- Travel to ECEP clinics at local and outreach community locations will take place in CDD/UNM vans – unless the Intern has made alternate plans to use their personal vehicle. In these instances, (i.e. the Intern selects to use their own vehicle when group travel is an option) mileage will not be reimbursed unless approved by the program director.
- During ECEP outreach travel, Interns will be reimbursed for hotel costs, and daily per diem at standard rates set by the University.

## **AUTISM SPECTRUM DISORDER TRACK**

### 1. Center for Development and Disability (All year)

The Autism Spectrum Disorder (ASD) Track is designed to provide generalist training in the practice of clinical psychology while developing specialized skills for assessment and intervention with individuals with Autism Spectrum Disorder. Across all clinical opportunities within this track, emphasis is placed on developing interdisciplinary practice skills, incorporating research supported interventions into practice, demonstrating cultural responsiveness, and functioning effectively within an underserved, rural state with a diverse population. This track also may allow opportunity to work with individuals with other neurodevelopmental conditions such as intellectual disability, attention and learning disabilities, mental health diagnoses, prenatal substance exposures, and genetic syndromes.

The UNM Center for Development and Disability (CDD) is a University Center for Excellence in Developmental Disability housing a myriad of diverse direct clinical service, prevention programs, interdisciplinary training, community training and partnerships, policy development and analysis, and applied research for the benefit of individuals with and at risk for disabilities and their families throughout New Mexico. The programs are administered through the UNM Department of Pediatrics, and funded through various state and federal agencies. CDD is located about two miles from the main campus of the UNM School of Medicine, where parking is available. The CDD serves a diverse community of patients, including our local Albuquerque community as well as the larger state, which consists of many rural communities where poverty and

intergenerational/historic trauma are frequent complicating factors for families. The CDD has 7 different divisions, one of which is the Autism and Other Developmental Disabilities Division (AODD). The core experiences of the rotation will take place in the AODD, which provides clinical services, training, consultation and information dissemination for individuals with ASD and their families and providers.

Clinical opportunities with the division will be focused in two areas: Assessment (year-long rotation provided through the Autism Spectrum Evaluation Clinic) and Intervention in both the Parent Home Training Program and the Facing Your Fears Program. Interns may participate in additional training, consultation and teaching, and research opportunities offered through AODD.

### Autism Spectrum Evaluation Clinic

Clinicians in the Autism Spectrum Evaluation Clinic (ASEC) specialize in interdisciplinary, evidence-based evaluation of children suspected of having ASD, ages 3 years through 21 years. Interdisciplinary teams vary, typically including psychology and speech and language pathology with consultation from pediatrics, psychiatry and social work. The clinic receives referrals from pediatricians, school personnel, mental health providers, and families from across the state of New Mexico. Under supervision, interns will conduct intake appointments (diagnostic interviews), complete diagnostic testing and provide feedback. The testing battery typically includes *Autism Diagnostic Observation Schedule, Second Edition (ADOS-2)* and cognitive, language, behavior and adaptive functioning measures. Modalities used for evaluations include in-person and telehealth (phone or video conference). Each family also receives a written report that details test results, diagnostic impressions, and recommendations after the assessment and feedback sessions.

The Intern will learn best practice assessment procedures for making a diagnosis of ASD, as well as conduct assessment of frequently diagnosed co-occurring conditions: developmental delay/intellectual disability; anxiety, depressive, and behavior disorders; speech/language disorder, impact of abuse/neglect and prenatal substance exposure. The Intern will also learn about other medical, genetic, neurodevelopmental disorders, and frequently occurring issues (such as sleep and eating problems) in autistic individuals. Emphasis is placed upon learning how to reliably administer, interpret, and convey the results of the various modules of *ADOS-2*, and cognitive and behavioral assessment measures. The Intern will be expected to contribute to written reports including test results and interpretation, as well as assist in case conceptualization, formulation of diagnostic impressions and intervention recommendations. The Intern will work as part of an interdisciplinary team, with emphasis upon functioning effectively as a psychologist within a team environment. Interns will also gain an increased understanding of providing psychological services within diverse, rural and underserved communities.

### Interdisciplinary Training Clinic

The Interdisciplinary Training Clinic (ITC) is a required experience for both ASD and EC Track Interns. The ITC brings together clinicians from ASEC and ECEP for a dynamic interdisciplinary training experience for a variety of learners, including Interns. Interns conduct developmental/diagnostic evaluations for young children referred for concerns about developmental or neurodevelopmental disabilities including ASD in the context of a supportive interdisciplinary environment.

The ITC fosters interdisciplinary teaming and learning. Clinicians conduct client “rounds” before and after the evaluation clinics to discuss clients, plan for evaluation and coordinate care. Interdisciplinary rounds are client/family centered (with a focus on understanding and meeting the needs of the family). The current disciplines represented include: Psychology (licensed faculty, postdoctoral psychology fellows, predoctoral psychology interns), Speech Language Pathologist, Social Work, Physical Therapy, Occupational Therapy, Physician (including pediatric intern, pediatric resident), Psychiatry (Child) Fellow, and Administrative Assistant. The current model allows for psychology postdoctoral fellows to provide clinical supervision to the Interns while under the supervision of a faculty member. The ITC is held on Thursdays from September through June and Interns are expected to participate in all aspects of the clinic.

### Minor Rotations

The following clinics are open to interns dependent on availability during the training year:

#### Early Childhood Evaluation Clinic

The Early Childhood Evaluation Clinic ECEP provides interdisciplinary developmental and diagnostic evaluations for children birth to three throughout the state of New Mexico. ECEP serves a wide-ranging population that reflects the unique and diverse communities of New Mexico. The ECEP team is interdisciplinary and typically includes a pediatrician, speech-language pathologist, occupational or physical therapist, and a psychologist. ECEP conducts approximately 300 evaluations each year that take place primarily in the CDD’s Albuquerque clinic, but also in community sites throughout the state.

ECEP provides ASD Track Interns an optional rotation as part of their Assessment experience at the CDD. During ECEP clinic, the Intern will administer standardized and informal evaluation procedures appropriate for children birth to three. Measures used are the *Bayley Scales of Infant and Toddler Development (Bayley-4)* and *Differential Ability Scales-II (DAS-II)* to assess cognitive development; adaptive behavior measures including the *Vineland-3* and *ABAS-3*; and the *Autism Diagnostic Observation Schedule, Second Edition (ADOS-2)*. Referral questions for children seen by ECEP

include Autism Spectrum Disorder, evaluation of medical and biological factors impacting developmental concerns, evaluation of behavioral and regulatory concerns and comprehensive developmental assessment to support early intervention providers who are finding certain children challenging to work with for a variety of reasons.

### Bilingual (English and Spanish) Clinics

Bilingual (English and Spanish) interdisciplinary evaluations are conducted within the context of ASEC and ECEP. Interns who participate in the bilingual evaluations and follow-up services are expected to have fluency with the Spanish language, but prior experience in evaluation or intervention services is not required. The Intern will be part of the interdisciplinary team, which includes a bilingual psychologist and a bilingual speech/language pathologist. The team uses culturally appropriate assessment batteries for evaluation of children suspected of having ASD and who are exposed to a bilingual environment. Clinicians administer and interpret bilingual speech and language measures, nonverbal cognitive assessments, the *ADOS-2* in Spanish, Spanish-language behavior questionnaires, and adaptive behavior measures. A certified language interpreter assists with the clinical interview if necessary and the family receives feedback in their preferred language. Modalities for evaluation include in-person and telehealth, in order to increase access to culturally and linguistically diverse clients. Interns are expected to contribute to case conceptualization with a consideration of the culturally and linguistically diverse issues in addition to the use of evidence-based practice evaluation of ASD. The family is offered a written summary of the evaluation report translated in Spanish and the Intern may be responsible for the development of a reader-friendly version of the translated report.

### Parent Home Training

The Parent Home Training (PHT) program is a no-cost, short-term educational program for parents and/or caregivers of children with ASD ages birth through five years. The program, funded by the NM Department of Health, provides individualized in-home or telehealth consultation to families throughout the state of New Mexico. The program is staffed by consultants in a variety of disciplines such as speech-language pathologists, occupational therapists, behavior analysts, special education, and behavioral health providers. Interns serve as PHT consultants and provide direct coaching to assist families to learn evidence-based strategies and integrate techniques into daily interactions with their children. The PHT model provides caregiver coaching rather than direct therapy for the child in order to promote the parent-child relationship. Interns will have the opportunity to carry their own caseload (6 – 8 cases at a time) and work with families individually or with other interdisciplinary team members. While the program is primarily completed via telehealth, Interns may be expected to travel to and from home visits in their own vehicle. Reimbursement is provided. Interns will also gain experience in working with culturally diverse, rural and underserved communities.

### Facing Your Fears Program

The Facing Your Fears Program specializes in evidence-based treatment of children and adolescents between the ages of 6-18 with co-occurring diagnoses of Autism Spectrum Disorder and, Anxiety Disorders (e.g., Separation Anxiety Disorder, Social Phobia, Generalized Anxiety Disorder), Tic Disorders, and/or Habit Disorders. Treatment is informed by the *Facing Your Fears Program*, a manualized treatment program for youth who have average and above language and intellectual abilities. Intervention is relatively brief, largely based upon cognitive and behavioral principles to reduce anxiety, and includes parent training throughout intervention. Also, frequently incorporated into treatment are specific interventions to address related challenges exhibited by children with ASD such as improving self-concept, managing bullying, increasing independence and adaptive functioning, improving social skills, and managing family conflict. Group sessions may be conducted either in-person or via telehealth.

### START Program

The NM START program is a new offering for interns. Launched in August 2023, START, which stands for Systemic, Therapeutic, Assessment, Resources & Treatment, is a comprehensive model of service supports that optimizes independence, treatment, and community living for individuals with intellectual/developmental disabilities (IDD), including Autism Spectrum Disorders and mental health needs. Through technical assistance from The National Center for START Services™, a program at the University of New Hampshire Institute on Disability, we are instituting this evidence-informed model of care to those in our community with the greatest need. The ASD track in interns who participate in this program will have the opportunity to conduct community trainings and support therapeutic coaching services.

### The typical caseload at CDD:

- 2 Assessment clinics per week
  - 1 ASEC clinic per week
  - 1 ITC clinic per week (September through June)
- 12 - 15 PHT visits per month
- 1 Facing Your Fears Group per semester
- CDD required didactics 1 – 2 hours per week

### Facilities/Resources/Space/Mileage & Travel for Autism Spectrum Disorder Track and Early Childhood Track

- In addition to cubicle space and computer, a cell phone will be provided for off-site home visits.
- The CDD has multiple rooms equipped with one-way mirrors/sound systems, and video recording capacity for live supervision

- The CDD has rooms equipped to deliver telehealth services.
- Interns will be expected to use their personal vehicles for travel to local home and metro community sites (unless traveling with the PHT or ASEC team). Interns will be reimbursed for mileage by their respective CDD program.
- Travel to clinics at local and outreach community locations will take place in CDD/UNM vehicles – unless the Intern has made alternate plans to use their vehicle. In these instances, (i.e. the Intern selects to use their own vehicle when group travel is an option) mileage will not be reimbursed unless approved by the program director.
- During outreach travel, Interns will be reimbursed for hotel costs, and daily per diem at standard rates set by the University.

## **MULTICULTURAL NATIVE AMERICAN AND RURAL BEHAVIORAL HEALTH TRACK**

1. Pueblo of San Felipe (All year)
2. Division of Community Behavioral Health
3. Other opportunities in rural New Mexico and Native American communities as they are available

The Intern on this track is primarily placed at the Pueblo of San Felipe, a rural tribal community in New Mexico that is a 30-minute drive from Albuquerque. The Pueblo of San Felipe is located between Santa Fe, 33 miles to the north, and Albuquerque, 30 miles to the south. Although situated between two urban centers, San Felipe is rural, consisting of 50,000 acres of trust land for farming and grazing. San Felipe is one of the most traditional tribes in New Mexico, with Keres (the traditional language) spoken by 87% of tribal members. There are approximately 3500 residents of San Felipe, 49% of whom are female. Most residents (99%) identify as Native American, and 33% are under 18 years of age.

The Pueblo of San Felipe has a robust Behavioral Health Program, including psychologists, social workers, masters level counselors, psychiatrists, and Certified Peer Support Workers that work on multidisciplinary teams. Certified Peer Support Workers (CPSWs) are Keres-speaking tribal community members with lived experience of behavioral health issues who have completed intensive training and credentialing in behavioral health service provision. CPSWs provide recovery-oriented Comprehensive Community Support Services and serve as cultural liaisons, partnering with interns and other licensed clinicians to provide culturally competent care.

Potential clinical sites include the:

- **School Based Health Center at the San Felipe K-8 Community School:**  
Interns work in collaboration with teachers, school-based staff, parents, and

CPSWs to provide individual and/or group-based therapy to youth in grades kindergarten to eighth grade at the Bureau of Indian Education school in San Felipe.

- **Indian Health Services Primary Care Clinic:** The primary care clinic is run by the Indian Health Service and is located in the Pueblo of San Felipe. Interns work in collaboration with primary care doctors, nurses, and other behavioral health care providers in an integrated health care setting. Interns receive warm handoff sessions from the primary care team to assist in addressing behavioral health needs that come up during primary care visits. Types of interventions are individual sessions focused on suicidality and risk assessment, brief therapy to address health concerns, insomnia treatment, and motivational interviewing. The clinic primarily serves adults and elders, though there are opportunities to see youth as well.
- **San Felipe Equine Therapy Program:** The San Felipe Equine Program is located in Algodones just a few miles away from the Pueblo of San Felipe. Interns work in collaboration with the equine therapy team which consists of licensed behavioral health providers and CPSWs to provide individual, family, and group-based experiential therapy for all ages. No prior experience with horses or equine therapy is a requirement of this site.
- **San Felipe Behavioral Health Clinic:** Interns work with CPSWs and other licensed behavioral health providers in the behavioral health clinic located centrally in the heart of the Pueblo of San Felipe. Interns provide individual, family, and/or group-based therapy to address a wide variety of mental health concerns (trauma, substance use, depression, anxiety, etc.) for clients across the lifespan. Evaluation and testing opportunities are also available if interns are interested.
- **Bernalillo Public High School:** Students in grades 9-12 from San Felipe attend a high school in the nearby town of Bernalillo. Interns provide individual therapy during the school day in collaboration with CPSWs on site at Bernalillo High School.

Interns are placed at these sites depending on the needs of the Behavioral Health Program and interests of the intern. Oftentimes interns select more than one site, and may also select to provide services off-site at one of our UNM settings, such as the Center for Neuropsychology, the Psychiatric Emergency Services, or the Sandoval County Regional Medical Center, depending on the career aspirations of the intern. Interns work with clients across the life span, providing school-based, clinic-based, and home-based services. The goal is to develop skills in providing culturally responsive, trauma-informed care, and complete training in the general practice of clinical/counseling/school psychology. This track is a place to put theory to practice when providing culturally appropriate and responsive care to children, youth, adults, families, and elders within a multicultural context.

Interns also have opportunities to work on public behavioral health policy issues, with the Pueblo of San Felipe, other tribal communities, and New Mexico's behavioral health state agencies through the Department of Psychiatry and Behavioral Sciences' Division

of Community Behavioral Health. This could include assisting with grant proposals, providing clinical trainings, and/or responding to clinical crises in rural and tribal areas.

This track is led by Dr. Deborah Altschul, a licensed psychologist and Vice Chair of Community Behavioral Health, who has been working with the Pueblo of San Felipe for over 16 years, and is onsite one day per week. Also onsite are an array of full-time licensed clinicians, San Felipe tribal members who serve as Certified Peer Support Workers and cultural liaisons, and a former intern and current postdoctoral fellow, Dr. Jalene Herron. Dr. Deidre Yellowhair is also a faculty in the Department who provides weekly psychoeducation groups at the San Felipe elementary school and interns often co-facilitate these groups. Finally, two department faculty members, Dr. Anju Jaiswal and Dr. Elise Morosin, provide child and adult psychiatric services in the Pueblo, and collaborate with interns on coordinated care for children, adolescents, adults and elders in the community. Interns are supervised by Dr. Altschul, Dr. Herron, and by a San Felipe Behavioral Health Program licensed clinician affiliated with the particular site where the intern is practicing.

### SEMINARS

<b>Research: Integration of Science and Practice</b>	<b>Ethical and Legal Standards</b>	<b>Individual and Cultural Diversity</b>
Trauma Training Series	Risk Assessment  Ethics is incorporated across the entire seminar series	Multicultural Topics Didactic Series
Department of Psychiatry and Behavioral Sciences Grand Rounds (Optional)	Law and Mental Health (Optional)	Provider Resiliency

<b>Professional Values and Attitudes</b>	<b>Communication and Interpersonal Skills</b>	<b>Assessment</b>
Training Director Meetings, which include Professional Development	Training Director Meetings, which include Professional Development	Risk Assessment
Provider Resiliency	Provider Resiliency	Early Childhood Track Didactic Series (Required for Early Childhood Track)

		Interns; Optional for others)
		Trauma Training Series

<b>Intervention</b>	<b>Supervision</b>	<b>Consultation and Interdisciplinary Skills</b>
Trauma Training Series (required) and Trauma-Focused Intervention Workshops (required for some interns, optional for others)	Supervision Didactic and Supervision Active Learning	HIV Echo Tuesdays (Required for Integrated BH Track Interns; Optional for Others)
Early Childhood Track Didactic Series (Required for Early Childhood Track Interns; Optional for others)		Provider Resiliency
ASD Track Didactic Series (Required for ASD Track Inters; Optional for others)		

Research: Integration of Science and Practice

Seminars in this competency domain will assist Interns with critically evaluating and disseminating research and applying evidence-based findings to clinical work. Topics related to evidence-based interventions (e.g. TF-CBT and ARC) and core concepts in trauma informed care will provide a venue to learn about integration of science and practice.

Ethical and Legal Standards

All seminars will incorporate topics related to ethics and legal standards in order to assist Interns with becoming knowledgeable about ethics/laws, recognize ethical dilemmas and apply ethical decision-making processes, and conduct themselves ethically in all professional activities. Topics in this domain will address confidentiality and privileged communications, sexual misconduct, dual relationships, ethical guidelines for working with ethnic, linguistic and culturally diverse populations and other ethical and legal topics as they relate to the provision of behavioral health services. The seminars are meant to be

experiential and directed toward exploring personal experiences, attitudes, feelings, and values regarding ethics and the law.

### Individual and Cultural Diversity

Seminars in this competency domain will help Interns to understand how their own history, biases, and other personal factors affect interactions, become knowledgeable of professional diversity literature, integrate individual and cultural diversity into professional activities, independently apply knowledge to work effectively with diverse others, and be culturally responsive.

The Multicultural Didactic Series is based on the understanding that training of culturally responsive and competent psychiatrists and psychologists begins by addressing personal attitudes, feelings, experiences, and values. The seminar utilizes a cultural responsiveness model that assumes that culture is a central aspect that must be considered in all types of behavioral health interventions. In particular, the seminar facilitates an exploration of how culture influences one's beliefs, attitudes, and behaviors regarding help-seeking, attribution of mental illness, communication style, and preferences for care. The seminar also explores the unique cultures of New Mexico and how culture impacts well-being. Recent examples of didactic topics include Native American/Indigenous Mental Health and Historical Trauma, Refugee Mental Health, and Gender and Sexual Diversity.

### Professional Values and Attitudes

Seminars in this competency domain will assist Interns with exploring and demonstrating values and attitudes of psychology, engage in responsible documentation, demonstrate self-awareness and self-improvement, learn how to be open and responsive to feedback, and respond professionally in increasingly complex situations with increasing independence. Topics will generally include: preparing for postdocs/jobs, licensure, advocacy, working in complex systems, self-care and wellness (provider resiliency), billing and documentation practices in managed care, and basic understanding of insurance and financial aspects of behavioral health care. The seminars in this series are meant to be experiential and directed toward exploring personal experiences, attitudes, feelings, and values as well as addressing the practicalities of applying for future jobs and postdoctoral experiences.

### Communication and Interpersonal Skills

Seminars in this competency domain will assist Interns with developing effective relationships with a wide range of individuals, engage in informative, well-integrated oral and written communication, and develop effective interpersonal skills. All of the seminars will involve discussions and active learning techniques to help Interns in the communication and interpersonal skills domain.

Professional development seminars will also touch on this topic. Interns will also participate in the Provider Resiliency series with a focus on self-care, wellness, provider resiliency and managing burnout.

### Assessment

Seminars in this competency domain will assist Interns with clinical interviewing, case conceptualization and clinical reasoning. Topics will include developmental and clinical interviewing and assessing for trauma. Interns will also spend time learning about risk (suicidal and homicidal) assessment.

Interns will also receive a Risk Assessment and Suicide Assessment introduction during Orientation. These topics are incorporated into the orientation for all interns and will assist with understanding how to conduct a risk assessment in areas of suicidal risk, homicidal risk, and other legal and ethical considerations as they pertain to risk management.

### Intervention

Seminars in this competency domain will help Interns with the development of effective therapeutic relationships, development of individualized evidence-based intervention plans, utilization of interventions that are well-informed by individual and contextual components, application of relevant research literature, effective adaptation of evidence-based approaches, and evaluation of intervention effectiveness. The modalities covered in this competency domain include: Trauma Informed Care (this includes looking at the impact of trauma, evidenced based practices for addressing trauma such as Trauma-Focused CBT and Attachment Self-Regulation, and Competency (ARC), and early childhood trauma).

The Trauma Series covers all aspects of trauma and its impact on children and families. The treatment and assessment of trauma is included. Trauma Informed Care is addressed, which this includes looking at the impact of trauma, evidenced based practices for addressing trauma such as Trauma-Focused CBT and Attachment Self-Regulation, and Competency (ARC), and early childhood trauma. These seminars incorporate a multicultural and developmental perspective and utilize a combination of lectures, problem-based learning, discussion, and case consultation.

### Supervision

Seminars in this competency domain will assist Interns with becoming knowledgeable about supervision models and practices and application of supervision knowledge. Topics will largely focus on models of supervision and consultation. There will be a didactic as well as an experiential component as Interns learn about and apply the various supervision and consultation models.

Practical, ethical and professional issues related to supervision and consultation will also be covered.

Consultation and Interdisciplinary Skills

Seminars in this competency domain will help Interns with the development of knowledge and respect for others' roles and professions and the broad application of interdisciplinary knowledge. The primary focus of seminars in this competency domain is interprofessional and interdisciplinary skills.

Meeting with Training Director.

The training director will meet monthly with the Interns as a group to discuss additional professional development topics in addition to providing a venue for feedback, questions, and topics related to current rotations and activities that need to be addressed.

Grand Rounds

The Department of Psychiatry and Behavioral Sciences Grand Rounds will occur every Friday and consists of presentations by nationally and regionally recognized guest speakers. Virtual grand rounds are planned in both the Department of Psychiatry and Behavioral Sciences and across the UNM HSC.

**CORE FACULTY**

**Sylvia Acosta, PhD**

*she/her/ella*

Associate Professor, Director of Psychology Training, Center for Development and Disability, Department of Pediatrics

**Graduate Program:** Colorado State University

**Primary Clinics and Track(s):** Autism Spectrum Disorder Track; Early Childhood Track

**Areas of Interest:** Assessment and intervention of Autism Spectrum Disorder and neurodevelopmental disabilities, addressing health disparities in bilingual and Spanish-speaking families, provision of culturally and linguistically responsive clinical services, Diversity, Equity and Inclusion topics

**Favorite thing(s) about New Mexico:** I enjoy the local cuisine, especially the chile.

	<p><b>Deborah Altschul, PhD</b> <i>she/her</i> Vice Chair of Community Behavioral Health; Co-Director of the Division of Community Behavioral Health Professor <b>Graduate Program:</b> University of Georgia <b>Primary Clinics and Track(s):</b> Multicultural and Native American <b>Areas of Interest:</b> Health Disparities Public Behavioral Health; Behavioral Health Services Research; Student-Athletes (Clinical) <b>Favorite thing(s) about New Mexico:</b> The beautiful sunsets</p>
	<p><b>Emily Andrews, PhD</b> <i>She/Her/Hers</i> <b>Graduate Program:</b> University of North Carolina Greensboro <b>Primary Clinics and Track(s):</b> Early Childhood track, Early Childhood Evaluation Program, Early Childhood Mental Health Services <b>Areas of Interest:</b> Infant and Early Childhood Mental Health (IECMH), dyadic and family-centered intervention and assessment approaches, caregiver engagement in children's mental health and assessment services <b>Favorite thing(s) about New Mexico:</b> Going on a walk at sunset (especially when the Sandias are in view!)</p>
	<p><b>Artemio Brambila, PhD, ABPH</b> <i>he/him/his</i> <b>Graduate Program:</b> California School of Professional Psychology-Fresno <b>Primary Clinics and Track(s):</b> Child Clinical Track <b>Areas of Interest:</b> Clinical Hypnosis; DBT (DBT-C, DBT-PE, DBT-SUDS); Family Tx; Psychological evaluations <b>Favorite thing(s) about New Mexico:</b> Outdoor Activities; Camping, cycling</p>

	<p><b>Additional Information:</b> Bilingual-English-Spanish Professor, UNM Department of Psychiatry and Behavioral Sciences</p>
	<p><b>Thomas A. Chavez, PhD</b> <i>he/him/el</i> <b>Graduate Program:</b> University of Wisconsin - Madison <b>Primary Clinics and Track(s):</b> Community Behavioral Health <b>Areas of Interest:</b> Latino behavioral health, Undocumented Immigrant mental health and wellness, Critical theories in health research <b>Favorite thing(s) about New Mexico:</b> New Mexico is my heart and home. I love the sense of community that expands to every corner of the state.</p>
	<p><b>Jennifer Crawford, PhD</b> More information coming soon</p>
	<p><b>Raven Cuellar, PhD</b> <i>she/her</i> Assistant Professor, Department of Psychiatry and Behavioral Sciences Clinical Psychologist &amp; Peer Support Specialist, Office of Professional Well-being <b>Graduate Program:</b> Miami University</p>

	<p><b>Primary Clinics and Track(s):</b> Child Clinical Internship Faculty; Trauma Specialty Track; Provider Resilience workshops</p> <p><b>Areas of Interest:</b> Professional well-being and resilience; coping with stress, trauma, and grief reactions; recognizing and responding to secondary traumatic stress, burnout, and moral distress; issues related to identity and self-development throughout the lifespan; and methods of promoting empowerment, equity and justice</p> <p><b>Favorite thing(s) about New Mexico:</b> The hiking and outdoor adventuring in New Mexico is spectacular and provides tremendous diversity of landscapes and opportunities to take part in cultural activities. One of my daily mindfulness practices is to pause and watch the sunset turn our Sandia Mountains shades of pink.</p> <p><b>Additional Information:</b> Feel free to ask me about my work co-chairing the Secondary Traumatic Stress Collaborative Group of the National Child Traumatic Stress Network. It's where I've gathered countless resources and evidence-informed strategies to promote clinician resilience and sustainment!</p>

**Elisa DeVargas, PhD**

*she/her/ella*

PhD in Counseling Psychology with a specialization in Spanish language services and research

**Graduate Program:** University of Oregon

**Primary Clinics and Track(s):** Programs for Children and Adolescents; Child Clinical Track

**Areas of Interest:** Elisa's clinical interests include child and adolescent development, parent skills training, trauma-focused intervention and family therapy. Her research interests include substance abuse prevention, cultural adaptation of EBPs, treatment outcomes, program development, and Latinx mental health. Dr. DeVargas has a long-standing commitment to developing her Spanish language skills and providing culturally sensitive services to underserved populations. Additionally, she currently serves as the New Mexico Psychological Association's Early Career Professional Committee Chair and the National Latinx Psychological Association's (NLPA) Early Career Psychologist Representative and chair to the NLPA's Bilingual Issues in Latinx Mental Health Special Interest Group.

**Favorite thing(s) about New Mexico:** I love Latin dancing, hiking in the foothills and bosque, and watching the beautiful NM sunsets.

**Rebecca "Dr. E" Ezechukwu, PhD**

*she/her/hers*

Assistant Professor, Department of Psychiatry and Behavioral Sciences

Clinical Psychologist, UNM School of Medicine  
Office of Professional Wellbeing

P.I./Project Director of ACTION: Addressing Childhood Trauma through Intervention Outreach & Networking

**Graduate Program:** Miami University

**Primary Clinics and Track(s):** Clinical Child Track

	<p>UNM Hospital Programs for Children and Adolescents ACTION Trauma Program</p> <p><b>Areas of Interest:</b> Dr. Ezechukwu has cultivated a professional focus around understanding multicultural stress, identity, resilience, and wellbeing, and promoting resilient outcomes for all individuals. She is especially committed to addressing the role that systemic discrimination, implicit bias, and historical trauma play in present-day health inequities among Black, Indigenous, and People of Color (BIPOC) communities. Dr. Ezechukwu's area of specialization includes the treatment of child, adolescent, and young adult psychopathology—particularly anxiety, depression, and stress and trauma-related disorders. Dr. Ezechukwu approaches psychotherapy and supervision from multicultural, developmental, and constructivist perspectives. Additional areas of interest and specialization: provider training and education; provider and organizational wellbeing to address burnout, secondary traumatic stress, and cultural bias.</p> <p><b>Favorite thing(s) about New Mexico:</b> I love the year-round sunshine and the landscape and the birds. I enjoy birding all over New Mexico.</p>
	<p><b>Evelyn Fisher, PhD</b> <i>she/her</i></p> <p><b>Graduate Program:</b> Georgia State University</p> <p><b>Primary Clinics and Track(s):</b> Autism Spectrum Evaluation Clinic, Neurocognitive Assessment Clinic</p> <p><b>Areas of Interest:</b> Autism assessment, pediatric neuropsychological assessment, congenital and genetic disorders, acquired brain injuries, complex communication needs, systematic review and meta-analysis</p> <p><b>Favorite thing(s) about New Mexico:</b> The hiking, road biking, and mountain biking :)</p>

	<p><b>Dina Hill, PhD</b> <i>she/her/hers</i> <b>Graduate Program:</b> University of New Mexico <b>Primary Clinics and Track(s):</b> Neuropsychology Track: Children's Psychiatric Center - Inpatient <b>Areas of Interest:</b> Neurodevelopmental disorders including ADHD, ASD, learning disorders; Fetal Alcohol Spectrum Disorders (FASD); Neuropsychology/neuroimaging <b>Favorite thing(s) about New Mexico:</b> All things Fall: state fair, balloon fiesta, Grecian festival, growers' markets</p>
 A portrait of Brian Isakson, PhD, a man with a shaved head and a goatee, wearing a light blue dress shirt and a yellow patterned tie. He is standing outdoors with green foliage in the background.	<p><b>Brian Isakson, PhD</b> <i>he/him</i> Professor Clinical Director Division of Community Behavioral Health Clinical Director of Behavioral Health Integration and Expansion Department of Psychiatry and Behavioral Sciences <b>Graduate Program:</b> Georgia State University <b>Primary Clinics and Track(s):</b> Child Clinical, Integrated Behavioral Health <b>Areas of Interest:</b> Trauma, refugee mental health, integrated care, policy, program development, program evaluation, grant writing, health disparities <b>Favorite thing(s) about New Mexico:</b> Outdoors, weather, New Mexican food</p>

	<p><b>Kimberly Kalupa, PhD</b> <i>she/her</i> <b>Graduate Program:</b> Uniformed Services University of the Health Sciences <b>Primary Clinics and Track(s):</b> Integrated Care Track- Truman Health Clinic <b>Areas of Interest:</b> Integrated Care, Health Psychology, Trauma. Previous research in eating behaviors, obesity treatment and community-based intervention. <b>Favorite thing(s) about New Mexico:</b> NM has stunning landscapes and beautiful light. I enjoy hiking and camping.</p>
	<p><b>David Lardier, PhD</b> <i>he/him/his</i> <b>Graduate Program:</b> Montclair State University <b>Primary Clinics and Track(s):</b> Multicultural and Child Clinical <b>Areas of Interest:</b> Clinical: My clinical interests focus on (1) trauma-informed clinical approaches; (2) culturally responsive, strengths-based therapeutic approaches; and (3) the treatment of substance misuse among adolescents and young adults. Research: My research interests center on three central areas of study, (1) the identification and examination of empowerment-based protective factors in substance misuse, mental health, and sexual health prevention; (2) the role of neighborhoods in the etiology of youth substance abuse and mental health outcomes, and (3) the implementation and evaluation of evidence-based interventions that can reduce youth and young adult substance misuse and improve their mental health and physical health. Education: My education interests focus on supporting learners to develop the knowledge and skills to become competent consumers of research, as well as prepare them for their upcoming clinical careers. I hope to always cultivate a creative learning and mentorship environment to empower and</p>

	<p>encourage knowledge development, clinical expertise and research skills.</p> <p><b>Favorite thing(s) about New Mexico:</b> My favorite thing to do in NM is to hike and camp with my family during Spring and Summer, as well as snowboard during the Winter. My favorite thing about NM, beyond the weather, is the culture and community of the people who call this place home.</p>
	<p><b>Kathryn Lenberg, MPH, PhD</b> <i>she/her/ella</i> Director of Behavioral Health, UNMMG <b>Graduate Program:</b> University of New Mexico <b>Primary Clinics and Track(s):</b> Integrated Care-Truman Health Services <b>Areas of Interest:</b> Clinical practice is focused on integrated care and reducing barriers to care. Education is focused on providing training to all members of a health care team in trauma informed care practices and patient centered communication. <b>Favorite thing(s) about New Mexico:</b> Hiking, camping, swimming, boating, SUPing</p>
	<p><b>Larissa Lindsey, PhD</b> <i>she/her/hers</i> Director of Clinical Services, UH Behavioral Health <b>Graduate Program:</b> Seton Hall University <b>Primary Clinics and Track(s):</b> Addictions and Substance Abuse Programs (ASAP); University Psychiatric Center (UPC); Children's Psychiatric Center (CPC) <b>Areas of Interest:</b> Clinical programming and administration; Quality improvement and evaluation Trauma conditions and Substance use Disorders Evidence-based treatments; Working with marginalized and disenfranchised populations Acute and crisis interventions; Trauma-informed and trauma responsive approaches</p>

	<p><b>Favorite thing(s) about New Mexico:</b> Hike up the Sandia mountain and look at the amazing views! Mariachi's Mexican food in Cedar Crest, Chopstix Chinese, and Basil Leaf Vietnamese.</p>

Hiking to the top of the Pino Trail is a must.</p>

**V. Ann Waldorf, PhD**

*she/her/hers*

Chief, Psychological Science Division

Vice Chair for Behavioral Sciences

**Graduate Program:** University of New Mexico

**Primary Clinics and Track(s):** Addictions

**Areas of Interest:** During her career, Dr. Waldorf has been involved in clinical care, education and training, program development, and administration at the New Mexico Veterans Affairs Healthcare System, Presbyterian Healthcare Services, and the University of New Mexico. She has served as faculty for UNM's Departments of Psychology, Psychiatry & Behavioral Sciences and Family & Community Medicine. Since 2014, Dr. Waldorf has served as Vice Chair for Behavioral Sciences, Department of Psychiatry and Behavioral Sciences. In this role, she is responsible for providing the vision and expertise necessary to expand the department's role in the School of Medicine, the Health Sciences System and the community through evidenced-based care development, research facilitation, inter-professional clinical education, and administration. For many years, the focus of her clinical and research activities has been the treatment of substance use disorders and the provision of integrated behavioral health services in medical settings.

**Favorite thing(s) about New Mexico:** It is hard to identify one favorite thing about NM as I love much it has to offer. That list includes beautiful natural resources, friendly and welcoming people, and great food!

**Additional Information:** Dr. Waldorf is currently a member of APA's Council of Representatives, representing Division 50-Society of Addiction Psychology

	<p><b>Amanda Ward, PhD</b> <i>she/her</i> <b>Graduate Program:</b> Loyola University Chicago <b>Primary Clinics and Track(s):</b> Neuropsychology <b>Areas of Interest:</b> Amanda is interested in the evaluation of children and adolescents with neurodevelopmental disorders, co-occurring medical disorders, as well early childhood assessment. <b>Favorite thing(s) about New Mexico:</b> Enjoying the beautiful weather and outdoors!</p>
	<p><b>Deidre Yellowhair, PhD</b> <i>she/her/hers/asdzáán</i> <b>Graduate Program:</b> Western Michigan <b>Primary Clinics and Track(s):</b> Multicultural Rural and Native American Behavioral Health <b>Areas of Interest:</b> Historical Trauma, Multicultural Psychology, American Indian/Rural Behavioral Health <b>Favorite thing(s) about New Mexico:</b> My favorite thing about NM is our NM Sunsets, the smell of roasting green chili during harvest and the rich diversity of the state.</p>
	<p><b>Eric Zimak, PhD, ABPP-CN</b> <i>he/him/his</i> <b>Graduate Program:</b> Ohio University <b>Primary Clinics and Track(s):</b> Pediatric Neuropsychology <b>Areas of Interest:</b> I evaluate children and adolescents with a range of neuropsychological concerns. Further, I work closely with colleagues in pediatric oncology, providing neurobehavioral exams and consults in Pediatric Oncology Survivorship Clinic. A primary research interest of mine is pediatric neuropsychology outcomes. I highly value supervising and teaching, and co-lead our neuropsychology case conference series.</p>

	<p><b>Favorite thing(s) about New Mexico:</b> I enjoy hiking, biking, and camping in the New Mexico sunshine. The access to great outdoor activities is just fantastic.</p>
	<p><b>Dara Zafran, PsyD</b> <b>Graduate Program:</b> James Madison University-Virginia</p> <p>More information coming soon</p>
