CONFERENCE DESCRIPTION

This one-day conference will be centered on the current challenges faced by clinicians, providers, and care systems in supporting families with infants and young children affected by complex trauma and substance use disorder, and the optimal model of care, which is trauma-informed and multidisciplinary. While this model is recognized as ideal, implementing it effectively remains difficult. We will present a number of evidence based models and approaches to providing care for families with these needs.

CONFERENCE OBJECTIVES

At the conclusion of this conference:

1. Participants will review and use clinical cases to guide care for fentanyl use disorder and prenatal fentanyl exposure.
2. Participants will be able to provide care for families with young children with complex trauma and substance use-disorder using a trauma-informed, culturally informed, multidisciplinary approach.
3. Participants will adopt best practices for management of neonates with opiate withdrawal syndrome using the Eat, Sleep, Console approach.
